## Executive summary

The current report summarises key trends and themes relating to implementation of the Sandgate RSL card-based gaming trial. Given that the six month trial only officially ended at the beginning of September (September 3, 2008), the evaluation phase commenced September 2008. It was agreed to commence evaluation after six months, given the potential confounding effect of player acquiescence during the trial.

This approach was taken given that talking to players during the 2004 trial was methodologically problematic. Focus groups raised the potential for players to have been influenced by talking about card-based gaming and precommitment. Conduct of the evaluation at the end of the trial thus ensures that there has been no 'experimenter' bias or player acquiescence and trial findings can be considered representative of true patron experiences.

In summary, the trial evaluation has included the following methodologies:

- Conduct of $\mathrm{N}=22 \times 40$ minute telephone surveys with card-based players
-- Conduct of two focus groups with Sandgate RSL card-based players
-0 Conduct of $\mathrm{N}=10$ product usability tests with non-card based EGM players
-- Interviews with Sandgate RSL staff involved in the card-based gaming
-. Interviews with staff of the card-based gaming implementation company (eBet)
-. Interviews with staff of the Licensed Monitoring Officer (LMO) (Odyssey)
-. Spend analysis of system data supplied by eBet for the six month trial period

In reviewing findings of the current card-based gaming trial evaluation, several caveats should be considered including:
-* player views represent perceptions ONLY and hence may not have a factual basis
-- there can often be disconnects between player attitudes and behaviours
-. the current evaluation is not a systems technical or compliance evaluation and is primary based on a human factors style evaluation of the system and its impacts
-• the limitations of the evaluation need to be considered in the context of a relatively small sample of trial participants and the self-selection nature of the evaluation (ie. only players who gave consent to contact were able to be included)

The product under evaluation was the eBet precommitment system. This is a simple precommitment system that allows players to set a daily spend limit, a maximum card balance and a transfer limit (from card to EGM credit meter). Balances are displayed on the card screen connected to the EGM.

## K E Y FINDINGS

Key findings of the second Queensland card-based gaming/precommitment trial at the Sandgate RSL highlight strong venue, player and LMO support for the precommitment system and overall usability of the product. This trial experienced few of the issues and problems inherent in the first precommitment trial and the overall trial was reported by all parties as being quite successful.

Key findings of the evaluation of the card-based system at the Sandgate included:

| Key findings | Descrip ion of hey dindings | Impleations |
| :---: | :---: | :---: |
| Finding 1. Findings showed that uptake of card-based gaming was not immediaze and require active venue promotion. | Findings showed that uptake of card-based gaming by venue patrons required approximately three months. In relation to uptake of card-based gaming, findings showed that: <br> - $23 \%$ of patrons took it up in the first trial month <br> - $20 \%$ of patrons took it up in the second trial month <br> - $47 \%$ of patrons took it up in the third trial month <br> This was also in the context of the venue actively trying to promote the product to players and actively 'recruiting' players to sign-up through direct approach to individuals. This involved a staff member standing at the door greeting individual club members who were attending the venue to play pokies. In total, approximately 66 patrons took up the product from trial commencement in March 2008 through to early September. | Findings of the current reseanch further highlight that precommitment and cardbased gaming will require active venue promotion to ensure optimal uptake of the product by patrons. Uptake and use of precommitment will only be as high as can be driven by the venue through venue promotions. |
| Finding 2. Set-up of the card-based gaming card was viewed as easy and efficient by card-based players. | Unlike the first precommitment trial where sign-up to cardbased gaming was viewed as extremely onerous (as passports and drivers licences had to be photocopied for 100 points ID), players held a view that the set-up and sign-up process for card-based gaming was easy and straightfoward. <br> A new sign-up approach was also possible, given the recent legislative change to the Anti-Money Laundering and CounterTerrorism Financial Act in December 2006. This new legislation requires reporting entities to adopt a 'risk-based' approach to regulation (risk implying whether a service has potential to facilitate money laundering or terrorism financing). In this context, this new approach was possible as card-based players were limited to patrons who were already members of the club. <br> Patron comments about the set-up process included: <br> - It was very easy. Straightfonword and no problems. <br> - It certainly wasn't enough to put me off playing. You just hod to fill out a form or so. It wasn't much of a big deal. <br> - I didn't have ony problems ot oll. it was pretty quick <br> Findings also suggested that most players ( $91 \%$ ) supplied written information about the functioning of card-based gaming read the supplied information. | Findings of the current research confirm that less intrusive sign-up processes for card-based gaming are much more acceptable to players. <br> This also highlights that a cand-based trial in a hotel context (where there may not always be a pre-existing loyalty program) would be a useful way to confirm the acceptability of card-based gaming to the hotel patron market. |
| Finding 3. Players reported high levels of satisfaction with the overall functionality and usability of the eBet cardbased gaming product. | Findings of research showed that virtually all surveyed players using the eBet card-based gaming product reported high satisfaction with the overall usability and functionality of the product In particular; $90 \%$ reported remembering PINs as very easy, $81 \%$ reported transferring money from the EGM to the card as very easy and $76 \%$ found transferring money from the card to EGM as very easy. Small percents also reported the same dimensions as easy, suggesting high product usability. <br> Findings of usability testing with players who had not used the card (hence minimising potential for practice-effects) also highlighted that most players found the product easy to grasp after a short initial 'training session'. | The eBet product addresses many of the functional requirements specified from the first precommitment trial (particularly a single simple limit). <br> The key to the successful usability of the product appears to be the simplicity of a single main limit (a nett daily spend limit) and a simple approach to money transfers to/from the EGM. <br> It is also apparent that strong venue commitment to the trial and quality training of players contributed significantly to the overall player product experience. |

| Key dichligs | Description or kay indings | Inplications |
| :---: | :---: | :---: |
| Finding 4. Players gave positive overall feedback about the card-based gaming play experience. | Findings of the card-based player survey highlight that players expressed high satisfaction and enjoyment with the card-based play experience. Despite a few early technical and usability isstues, player confidence in the product was very high and players felt reassured about the safety of their money on the card. <br> Reflecting this, $72 \%$ of players believed the gaming card helped them enjoy the pokies more than regular gaming and players cited the convenience of cashless gaming as the main benefit (ie. not having to use cash/coins), along with not having to wait for pay-outs or hopper refills. Illustrative comments included: <br> - I think it's a great ideo. It's brilliant. I used to win and a lady would hove to bring the money out. Now it's a form of soving. Like a credit card or the some principle. <br> - li's good you don't have to woil for pay-outs. You's be waiting a while and then the club bus would arrive and you'd worry about missing it woiting for a pay-out. <br> - like thot you don't have to wait for that last cent. You just toke out your cord and it zaps the money off. <br> - Convenience is a big benefit. You win $\$ 150$ and then you have to woit for a goming person and so you miss the dub's free bus. But with cards, you con take it ond go. <br> - I like that your fingers don't turn black It's also convenient not having to woit for a pay out (Female player) <br> While harm-minimisation benefits were not seen as the main overall benefit, a number of players emphasised the benefts of being able to see the card balance (ie. what is spent) and precommitment as a benefit. Comments about harm-minimisation benefits included: <br> - I think weve soved o lot from hoving the card. It just keeps you focused within the session. Like how much you've spent. We olso the leaving money on the card for next time. l's's like soving to plon for future entertoinment. It's also good because you con save money for next time ond not get hit when the bills comes in. <br> - I put mine in $\$ 10$ lots, so I think it did help me o bit. (reference to the transfer limit) <br> - When staff bring out 20 bucks to pay you out, you do feel inclined to spend it. But if it's a $\$ 50$, it's a whole different thing. So the cord helps you. With $\$ 50$, you toke it to the counter and ask to split it up. So in a way, the cards avoid you overspending. <br> - It's a lot easier monitoring spending on the cord. If ifeel Im spending too much, I romp the tronsfer amount dow, especially iflm feeling I'm going too close. When I get that message you are now opproaching your limit' or whatever, I think I better pull out the cord. <br> - Ifyou have limits, you have better control over your spending. I' m a pensioner and ive got a limit of $\$ 50$ ond then once I reach it, I give it awoy. <br> - Wih the cord it seems to draw your attention to it. It mokes you think oreroll. I'm glad thej've brought it in <br> Findings of the player survey also suggested that $58 \%$ felt that the card encouraged them to think more about their expenditure and $45 \%$ felt that using the card encouraged them to think more about the affordability aspect of their pokies spending. It was also apparent that higher-risk players (as measured by the CPGSi) were even more likely to think this than lower-risk recreational players. | Findings of research highlight that players see the primary benefit of card-based gaming as the convenience of cashless play (particularly no waiting and no handing of cash) and ease of monitoring spending and limits as secondary benefits. <br> Given that many players just use cardbased gaming for 'cashless convenience', findings of this trial further emphasise the need for venues to actively promote harm-minimisation benefits to ensure that they are leveraged by players. <br> This is particularly important in view of evidence to suggest that players with higher-risk for problem gambling may see more benefit in the ability of card-based gaming to assist in monitoring expenditure and the affordability of gambling. |

| Key findugs | Description of ley finding | Impliations |
| :---: | :---: | :---: |
| Finding 5. Complex analysis of 21,310 EGM play transaction records highlights some interesting player behaviour in response to card-based gaming. | As part of the card-based gaming trial, 21310 play transactions were analysed for the 64 card-based players using raw play transaction data supplied by eBet. This complex and very involved exercise showed a number of interesting insights into player use of card-based gaming and player behaviour during card-based gaming. <br> As it is not possible to draw definitive conclusions (as there. was no way of tracking card-based play from non-card play just using the loyalty (ard), findings should be considered indicative with limitations of this analysis and small sample considered <br> Supporting the comprehensiveness of the trial, analysis suggested that many card-based players had high use of their card during the trial period. Specifically, data analysis suggested that: <br> - players on average used the card for 21.75 days of play during the trial (or 1,392 days across 64 players) <br> - $71.9 \%$ of players had 21 or more sessions of card use for each day of EGM play ( 8,12 ) sessions during the triol period) (Sessions are defined as EGM play from the point of cord insertion to cord removal) <br> - players turned-over on average $\$ 7,415$ during the trial period (and a total of $\$ 444,934$ across 64 players) (Turnover is money put through - not money spent) <br> - average nett player expenditure for the trial was approximately $\$ 923$ and equivalent to a spend per player of $\$ 48.10$ per day <br> - players each spent an average of 2016 minutes of EGM play on the card during the trial <br> A comparison of transactional data six months BEFORE and six months FOLLOWING implementation of card-based gaming (1-9-07 to 31-8-08) also showed that: <br> - sessions of play per day increased slightly from pretrial to trial (from 383.2 sessions per day before to 386.7 sessions per day following card implementation) - while this may be due to a 'novelty effect' of the new card, it is likely that this is more so due to the ability of players to more easily move from EGM to EGM <br> - EGM turnover reduced slighthy from $\$ 344$ to $\$ 319$ per player per day and EGM spending (nett loss) reduced from $\$ 41.97$ to $\$ 39.78$ per player per day (a $5.2 \%$ decrease in nett expenditure) <br> - a total of only 18 of 64 card-based players elected to set a limit on their card during the trial (despite benefits being actively promoted by venue staff) (equating to roughly only $28 \%$ of players) <br> - while transfer limits were marginally more difficult for players to understand than nett daily spend limits, the most common type of transfer limits set by players was the default value of $\$ 100$ transfer at a time. Similarly, players also stayed with the $\$ 1000$ default maximum card balance <br> - limits set by players were generally conservative $N=11$ limits were set a $\$ 50, \mathrm{~N}=9$ limits were set at $\$ 100$ and $\mathrm{N}=3$ limits were set at under $\$ 50$ (Note this does not add to total players as four players changed their limits and one further player did not set a limit on sign-up, but then elected to set a limit later) | Analysis of EGM transactional play data confirms that players have extensively trialled the card during the six month trial period and given the eBet product significant use to allow condusions to be drawn about its overall usability as a cand-based gaming product. <br> Findings highlight that, despite emphasis of benefits, uptake of limits as an 'opt-in' process is likely to be low in most market situations. From this perspective, introducing an 'opt-out' form for limits (ie. where players have to purposely opt-out of a limit by completing a form) may be worth considering as a harm-minimisation measure. <br> There is also potential to introduce harmminimisation information at the point of players setting limits to ensure that informed decisions are made about the affordability of selected limits. <br> This is particularly important, given that players are very unlikely to change their spend limits once they are set (often because they cannot be bothered). <br> This information could also include a table outlining likely discretionary spending for players on different household or personal incomes. |

| key fridings | Descripiton of key findings | Impllations |
| :---: | :---: | :---: |
| Finding 6. Venue staff reported positive experiences with card-based gaming and the usability of the card-based gaming product. | Findings of the current trial clearty highlighted a very different experience of card-based gaming by the implementation venue. Staff were generally satisfied with the product and had positive praise for the ability and motivation of both the system supplier and the LMO to support product implementation. Venue uptake of the product was also strongly associated with an interest in consumer harm-minimisation and a desire to be viewed as a leader in harm-minimisation. <br> Staff also reported some reduction in workloads due to the convenience of less player support required in cashless gaming (eg. fewer payouts and hopper refills). Staff held a view, however, that 'big punters' seemed less interested in card-based gaming and suspected that this was linked to a fear of play being monitored. Example comments made by staff suggesting support for the product included: <br> - Ithink it's great it wosn't dounting ot oll. Phyers don't have to wait for poyouts or hopper refills. Weve found it less work There's aiso less dealing with customers in chonging money. <br> - Ithink the benefits are that it helps people control their spending. People hove been soying - I wos surprised how quickly I did that $\$ 100$. But I don't think the problem gamblers ore toking it up. Not too many of the platinum loyaly members have token it up. <br> - I felt very confident with the training provided. We olready had the eBet loyolty system for a couple of years ond it made the training much easier. We were afready pretty familiar with it. <br> - I think it's pretty easy to use. The only problem is moking sure people know to frrst put their cord pin number in. Sometimes they put it in without the pin and then have problems. <br> - We do save some time, but I fel we spend more time now troubleshooting the system. It's hord to say given that some problems ore also becouse it's new ond were not as fomilior with the new system <br> - Not oll stoff ore competent in it os yet though. It takes a whide for staff to learn. | Unlike the first precommitment trial where the venue owner was not strong in support for card-based gaming, the current venue was very supportive. <br> This in turn has assisted with the overall success of the card-based gaming trial, as identified in the first precommiment evaluation. A fur ther success factor was the quality of the training provided by the system supplier and the simplicity of the limit options (a single main limit) and ease of product usability. |

| Key Sindings | Desaription of kay finching | Implications |
| :---: | :---: | :---: |
| Finding 8. Usability testing of the card-based gaming system indicates that the eBet product is easy to use for most players. However, a range of minor improvements were suggested by players. | Key findings of usability testing included: <br> - while some users said they would not want to sign up for the card due to potential limits to "flexibility in spending", all users believed the card to be a potentially valuable tool for managing gaming expenditure <br> - users interested in the card suggested that the separation of entertainment expenditure from everyday spending would be valuable <br> - card limits were easily understood, particularly after reading supporting information <br> - key drivers of the choice to set limits and limit levels included personal income, entertainment budget, the perceived amounts needed to "have fun" and "have a win" and perceived amounts that constitute reasonable and excessive spending <br> - preferred daily limits generally ranged between $\$ 50$ and $\$ 100$ <br> - $\$ 1000$ was generally considered to be an appropriate card balance limit <br> - while most players found the gaming card easy to use, some had trouble understanding how money was transferred between the card and the machine and how to check the card balance while playing or made mention that it flashed up too quickly to see <br> - users considered the expenditure statement as an excellent tool, providing visibility to spend on gaming machines | While the card-based gaming system is generally well-designed, minor future refinements to the design could include: <br> - providing additional information on the benefits of the card both from a gaming point of view (e.g. loyalty points) and from a harm-minimisation perspective (i.e. how the card can help manage expenditure) <br> - reformatting the application form to allow applicants to fill it out from top to bottom, rather than left to right <br> - simplifyingfurther explaining terms that are not commonly used, such as "Net Daily Limit" and "configuration" <br> - providing clear instructions about how to transfer money onto the card and checking the card balance during play (ie. having a button with check balance on it, instead of transfer which is currently the way of displaying the balance. In addition, showing the balance for a few more seconds than currently displayed would be more useful (as the display is too quick and can lead to people missing the balance) <br> - implementing harm-minimisation warnings on the card or incorporatingharm-minimisation algorithms designed to protect players from harm <br> - having a mechanism for players to easily display their limits at the EGM interface. |

## Summary

Findings of a product evaluation of the eBet card-based gaming trial at the Sandgate RSL highlight positive player, venue and provider experiences with the trial. Most notably, the product is viewed as user-friendly by players and most players see both convenience and harm-minimisation as potential key benefts of the product.

From this perspective, the current trial has been quite successful and subject to results of compliance testing, the eBet card-based gaming product could be seriously considered for further roll-out across other venues in Queensland.

Overview

The current report summarises key trends and themes relating to implementation of the Sandgate RSL card-based gaming trial. Given that the six month trial only officially ended at the beginning of September (September 3, 2008), the evaluation phase commenced September 2008. It was agreed to commence evaluation after six months, given the potential confounding effect of player acquiescence during the trial.

This approach was taken given that talking to players during the 2004 trial was methodologically problematic. Focus groups raised the potential for players to have been influenced by talking about card-based gaming and precommitment. Conduct of the evaluation at the end of the trial thus ensures that there has been no 'experimenter' bias or player acquiescence and trial findings can be considered representative of true patron experiences.

In summary, the trial evaluation has included the following methodologies:

- Conduct of $\mathrm{N}=22 \times 40$ minute telephone surveys with card-based players
- Conduct of two focus groups with Sandgate RSL card-based players
-. Interviews with Sandgate RSL staff involved in the card-based gaming
-. Interviews with staff of the card-based gaming implementation company (eBet)
-. Interviews with staff of the Licensed Monitoring Officer (LMO) (Odyssey)
-. Spend analysis of system data supplied by eBet for the six month trial period

## Caveats

eBet

Report structure
In reviewing findings of the current card-based gaming trial evaluation, several caveats should be considered including:
-* player views represent perceptions ONLY and hence may not have a factual basis
-- there can often be disconnects between player attitudes and behaviours

- the current evaluation is not a systems technical or compliance evaluation and is primary based on a human factors styie evaluation of the system and its impacts
-. the limitations of the evaluation need to be considered in the context of a relatively small sample of trial participants and the self-selection nature of the evaluation (ie. only players who gave consent to contact were able to be included)

The product under evaluation was the eBet precommitment system. This is a simple precommitment system that allows players to set a daily spend limit, a maximum card balance and a transfer limit (from card to EGM credit meter). Balances are displayed on the card screen connected to the EGM.

Within this context, the current report summarises key findings of the card-based gaming trial as follows:
-- Player experiences with card-based gaming
-- Player expenditure on card-based gaming
-• Venue, supplier and LMO experiences with card-based gaming

## Player experiences with card-based gaming

This section reports on uptake of card-based gaming by venue patrons and summarises key attitudinal insights from the survey and focus groups with card-based gaming players. In total, $\mathrm{N}=22$ players participated in a 40 minute telephone survey and two focus groups. The structure of this section of the report includes:
-- Analysis of uptake of card-based gaming
-- Ease of set-up of card-based gaming
-- Player experiences with card-based gaming
-- Player experiences with limits and warnings
-. Future directions for card-based gaming
-- Technical problems experienced by players during card-based gaming

## Analysis of uptake of card-based gaming

Context

The card based system was implemented by eBet in the Sandgate RSL during March 2008 and at the beginning of September 2008, had been in operation for approximately six months. By September 3 2008, a total 66 players had taken up the card (based on system data supplied by eBet). Participation in the trial was limited to current members of the Sandgate RSL.

As presented in Table I, approximately half of players only took up the card-based system around the third month into the trial. This shows that overall uptake is by no means immediate. Uptake of the card was very limited after the third month of the trial, with less than $10 \%$ of total card players taking up the card during this period.

Table 1. Percent of players uptaking card-based gaming at Sandgate RSL by month (March to September 2008)

| Montho inptake of cardtased gaming system at Sandzate iS1. | is to tal players ep tahing card based gamlhs? |

Wonths during card-based gaming Irfal (March-September 2008 Evaluation Period)

## Ease of set-up of card-based gaming

Ease of card set-up

As part of the card-based gaming trial, players were required to complete an application form to set-up their card-based gaming and a further form to adjust parameters on the card. As the card-based gaming was limited to players already participating in the Sandgate RSL loyalty program, the entire process was quite efficient and was reported to take between 10 - 15 minutes per player.

Comments made by players about the set-up process associated with card-based gaming were very positive and suggested that the sign-up process was not viewed as onerous. This also contrasts significantly with the frrst card-based gaming trial, which required 100 points of identification (ie. such as producing and photocopying a passport and driver's licence) prior to gaining access to the card. Also reflecting positive sentiment was the finding that $68 \%$ of players 'strongly agreed' and $32 \%$ 'agreed' that the set-up process was 'easy and straightforward' (ie. 100\% agreement - refer Figure I on page 17).

The less onerous identification requirements were able to be applied in 2008, given the recent establishment of the new Anti-Money Laundering and Counter-Terrorism Financing Act in December 2006 (AML/CTF Act). The AML/CTF Act now implements a risk-based approach to regulation. Reporting entities are required to determine a way to meet obligations based on an assessment of 'risk' (ie. of whether providing a service may facilitate money laundering or terrorism financing).

Specific comments made by card-based players about the set-up process included:
-. It was very easy. Straightfoword and no problems.
-. It certainly wasn't enough to put me off playing. You just had to fitt out o form or so. It wasn't much of a big deal.

- I didn't hove any problems at oll. It was pretty quick.
* My husbond mainly went through the whole set-up process, as he simply wanted to find out what it was oll about
- It took only 10 minutes. It was seamless, aport from the card issue I had. Im now up to my fifh card! (The player had experienced problem with her cards that was suggested to be related to the card itself, rother than the card-based gaming system)

Provision of written information prior to sign-up

Prior to sign-up, approximately $95 \%$ of players recalled receiving written information (which was supplied by venue staff in the form of a brochure). The level of readership of the supplied written information is presented in Table 2 (based on player report). Findings suggested that approximately three-quarters of players reported reading most information in the brochure (77\%).

Based on player CPSGl risk segmentation, there was also a slight trend for higher-risk players to be marginally less likely to read the supplied information. While individual differences across players may explain this result, it may also suggest that higher-risk players are less likely to read supplied information. Accordingly, this may be of interest to explore in future research.
Table 2. How much written information was read -
BY CPGSI RISK STATUS (N=22, September 2008)

[^0]Ease of using
the new
gaming card

Player ratings of the ease of using the new gaming card are presented in Figure 1. As results suggest, players generally had few difficulties in using the new gaming card after several months of practice.

The functionalities of transferring money to and from the card were generally found to be user-friendly and most players managed to remember both their PIN number and to insert the gaming card prior to play. One focus group participant also made mention that loyalty points were the main motivation for inserting the card - I don't forget to put in my card, as you know you have to put the cord in to get the loyalty points.

Figure I. Ease of using the new gaming card ( $\mathrm{N}=22$, September 2008) ${ }^{\text {a }}$

[^1]Ease of use results from the survey by the CPGSI risk status of the players are presented in Table 3. While both groups had few difficulties, there appears to be a slight trend for higher-risk players to experience slightly more usability issues. This may be due to individual differences across the group demographics or simply because higher-risk players had greater usage of their card.

Table 3. Ease of using the new gaming card - BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

| Aspectsof cardlasad play | $\begin{aligned} & \text { MEAN (1) } \\ & \text { Recreational } \\ & \text { gambers } \\ & \text { (scones } 02) \\ & (N \operatorname{lin}) \end{aligned}$ | DIFICULT <br> Hgherrisk gamblers (scores 3 or oven) (NFS) | VERYEASY) <br> Overall $(N-22)$ |
| :---: | :---: | :---: | :---: |
| Remembering to insert the card into the gaming machine before pokies play | 4.8 | 4.4 | 4.6 |
| Remembering your PIN number for your gaming card | 4.9 | 4.8 | 4.9 |
| Transferring money from the card to the pokies machine | 4.8 | 4.1 | 4.5 |
| Transferring money from the poker machine back to your card, when you want to leave | 4.6 | 4.6 | 4.6 |

a. Question - Using a scale where $1=$ very difficult ond $5=$ very easy (3 is neutrol), please indicate how easy or difficult you found the following aspects of pokies play with the gaming caro? (Base: All cord-bosed players)

## Player experiences with card-based gaming

Overall
experiences

Key player ratings of various aspects of the card-based gaming experience are presented in Figure 2. Findings overall highlight positive player feedback about the usage experience and the overall usability of the card-based gaming product.

Figure 2. EGM Player Attitudes about the Card-based Gaming trial ( $\mathbf{N}=\mathbf{2 2}$, September 2008) ${ }^{\text {a }}$

o. Question - Using a scole where $1=$ strongly disagree and $5=$ strongly agree ( 3 is neutral), please indicate to what extent you ogree or disagree with the following statements obout the goming cord (Base: All cord-bosed plopers)

In particular, findings highlight that, after up to six months of card usage:
-0 $95 \%$ of players now feel confident using the card-based gaming
-* $86 \%$ felt confident using the card after the first day of use
-* $100 \%$ found the sign-up process easy and straightforward

- $58 \%$ felt that the card encouraged them to think more about their expenditure
-. $45 \%$ felt that playing with the card encouraged them to set a spend limit for pokies play, compared to regular cash-based gaming
-. $45 \%$ felt that using the card encouraged them to think more about the affordability aspect of their pokies spending.

Overall experiences by risk status

Mean player ratings presented according to the risk status of the card-based player (as measured by the nine-item Canadian Problem Gambling Severity Index) are presented in Table 4. Given the very small sample of players at different levels of risk, players scoring from $0-2$ were deemed 'recreational gamblers' and players scoring 3 or over were deemed 'higher risk gamblers'. This was also to evenly distribute the groups, given the small sample sizes in each.

Table 4. EGM Player Attltudes about the Card-based Gaming trial - BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

| SIGNING UP FOR THE NEW GAMING CARD |  |  |  |
| Signing up for the new gaming card was easy and straightforward | 4.8 | 4.6 | 4.7 |
| The written information provided on the new gaming card clearty explained card based gaming | 4.5 | 4.0 | 4.3 |
| Signing up for the new gaming card was time-consuming | 1.6 | 2.0 | 1.8 |
| WORKING OUT HOW TO USE THE NEW GAMING CARD |  |  |  |
| I now feel quite confident using the gaming card | 4.6 | 4.9 | 4.7 |
| Venue staff were open to me asking questions about the gaming card | 4.6 | 4.7 | 4.6 |
| It was easy to reach staff if 1 had any queries or problems with the gaming card | 4.7 | 4.4 | 4.6 |
| I felt confident using the gaming card the first time after my first day of using it | 4.8 | 4.0 | 4.5 |
| The card based gaming system is quite easy to use and userfriendly | 4.6 | 4.4 | 4.5 |
| Staff provided good training or instructions on how to use the gaming card | 4.5 | 4.1 | 4.4 |
| It was easy to work out how to use the gaming card at the start of the trial | 4.5 | 3.9 | 4.2 |
| YOUR ENJOYMENT OF THE NEW GAMING CARD |  |  |  |
| 1 l enjoyed using the gaming card for pokies play at the Sandgate RSL | 4.6 | 4.9 | 4.7 |
| Using the gaming card made my pokies play a more enjoyable experience | 4.1 | 4.3 | 4.2 |
| Using the gaming card helped me enjoy my pokies play more than regular cash gaming | 3.7 | 4.7 | 4.1 |
| COGNITIONS ASSOCIATED WITH THE NEW GAMING CARD |  |  |  |
| Using the card encouraged me to think more about my pokes expenditure, compared to regular cash based gaming | 3.6 | 4.0 | 3.8 |

Table 4. EGM Player Attitudes about the Card-based Gaming trial - BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

[^2]While small samples make it difficult to assess statistically significant trends, it is interesting to observe that, relative to lower-risk recreational gamblers, the higher-risk gamblers more strongly agreed that the card:

* encouraged them to think more about their pokies expenditure, compared to regular cash based gaming
*- encouraged them to think more about how much they can afford to spend on pokies play, compared to regular cash based gaming
* encouraged them to think more about the amount of time they spent playing the pokies, compared to regular cash based gaming

In contrast, however, higher risk gamblers did not differ from recreational gamblers in terms of whether the card more actively encouraged them to set a spend limit for pokies play, compared to regular cash based gaming.

This may be because the option for setting a limit was voluntary and players could use the cashless gaming feature of the card without having to set a limit. It was also apparent that the higher-risk players tended to enjoy the card-based gaming slightly more than the recreational gamblers. This is probably because they generally play more frequently.

Perceived benefits of card-based gaming

Harm-minimisation benefits

Apart from making comment about their overall experience with card-based gaming, players were asked to cite a range of benefits of card-based gaming during focus groups. Most players cited the convenience of not having to use cash/coins as the main benefit of card-based gaming, along with not having to wait for pay outs or wait for hopper refills. Also mentioned was the benefit of being able to keep better track of what is spent on EGM play. It appears that this was viewed as an important benefit, but for most players, the convenience of cashless gaming was most salient.

Illustrative comments made by players about benefits of the card-based gaming in the context of focus groups included:
-" Ithink it's a great idea. It's briliant. I used to win and a lady would have to bring the money out. Now it's a form of soving. Like a credit card or the same principle.
-. It's good you don't have to wait for pay-outs. You'd be waiting a while and then the club bus would arrive and you'd worry obout missing it waiting for a pay-out.

- I like that you don't have to wait for that last cent. You just take out your card and it zaps the money off.
-. Convenience is a big benefit. You win $\$ 150$ and then you have to wait for a gaming person ond so you miss the club's free bus. But with cords, you con take it and go.
-- I like that your fingers don't turn black lt's olso convenient not hoving to woit for a pay out (Female player)
*- The main thing is convenience. You don't have to wait for pay-outs. There'd be the bus coming and you'd be waiting for a pay-out and worried that you wouldn't be able to calch the bus. But with cards, it's so much easier.
-- I sow the main benefits as not waiting for payouts ond hopper refills. Everyone sow this as the biggest feature. Also not having to get change.
-- Most people I've spoken to have said it's a great idea.
-* One person I spoke to obout putting me nome down said he got put off as he thought they'd be getting all that interest on his money.

Players were also asked to make comment about whether they believed that cardbased gaming had affected their overall play behaviour during the initial telephone survey. This was purposely asked as the very first question to avoid influencing players. Top of mind comments about how the gaming card affected play included some comments about potential card harm-minimisation benefits, however, the sheer convenience of not having to rely on or wait for cash was the main theme:
** It's hasn't really chonged my play/No effect reported - $9 x$

- I don't have to corry cash around.
- Didn't have to wait for payouts. Could just leave it on your cord and toke it home.
- I think it's one of the best things that has ever been brought in. The limit idea is wonderful and you are not carrying money around which is safer.
-. It was a lot easier to keep trock of and made me more awore of my spending.
** Much easier to pull out my winnings when I should.
** When I win I just toke it out and I go.
- None really. The only thing is that I can keep the money on the card to use for next time.
- Found it difficult to work at first. I collected my money, rather than leaving it on the card. It made me more awore of whot I wos spending.
- I think it's better - you don't have to take the money, you con leave it on the card. Once you hove reached your limit, it won't give you onymore. I think it's an excellent idea.
- It has probably increased my playing time and made it easier to play.
- I found it very convenient. It was just the convenience of it all that I enjoyed.
* It made me more awore of what I om spending. Made me aware of the omounts and mode me think more obout it
-* A lot better because if you have money you lefl over; it just stays on the card. I think it has improved my gambling. It is an advontage to me.

Comments made by players during focus groups also suggested that some players believed that the card supported improved monitoring of EGM spending, even in the case of a player electing NOT to set a limit. This was mainly attributed to the ability to view card balances and transfer different amounts when the card was inserted.

One player also mentioned that being able to access money quickly was a beneft, given that it allowed players to not be tempted to play further while waiting for a pay-out. In addition, payouts of particularly $\$ 20$ notes were seen to 'tempt' the player to spend the money (and there would be more of a temptation compared to pay-outs of $\$ 50$ notes).

Comments made by players about the harm-minimisation benefits of card-based gaming on a general level (as made during player focus groups) included:

Thene $\mid$ Specic comments

Players who saw harm-minimisation benefts in card-based gaming

- Ithink weve saved a lot from having the cord. It just keeps you focused within the session. Like how much you've spent We also like leoving money on the cord for next time. li's like saving to plan for future entertoinment. It's olso good becouse you can save money for next time and not get hit when the bills comes in. We even had a plon to build it up over time to sove for Christmas presents. But so for, it's not working. The mochines aren't paying (loughter)
- I put mine in $\$ 10$ lots, so I think it did help me a bit. But if I run out, I ask my husband for more or how much he has on his card.
- It's more convenience for me. If you're woiting for o poyout, you whack another $\$ 20$ into the mochine agoin while woiting. So it stops you from doing this. You take your card ond go. I think that this is the best thing about it. When staff bring out 20 bucks to pay you out, you do feel indined to spend it. But if it's a $\$ 50$, it's a whole different thing. So the cord helps you. With $\$ 50$, you take it to the counter and osk to split it up. So in a way, the cords ovoid you overspending.
- It's a lot easier monitoring spending on the cord. If feel I'm spending too much, I romp the tronsfer omount dow, especiolly if im feeling im going too close. When I get that message you are now approaching your limit' or whatever, I think I better pull out the cord.
- If you have limits, you have better contsol over your spending. I'm a pensioner ond ive got o limit of $\$ 50$ and then once I reach it, I give it away.
- With the card, it seems to drow your ottention to it. it makes you think overall i'm glad they've brought it in

| Theme | Specinc comments |
| :---: | :---: |
| Pioyers who saw ham-minimisation beneftrs in cord-bosed goming (cont'd) | - It's o positive effect in keeping to limits. <br> - You've got better contsol over your spending. I'm a pensioner ond ive got a linit of $\$ 50$ and then I give it owor. <br> - Thoven't got o limitit on mine, but I have a brain limit and it still helps me monitor my spending os you can see it on the screen. <br> - Say you go to the bank and drow out $5 \times \$ 20$ notes. Then you look at the money and soy where did thot money go? You don't think You keep everything in your brain oport from your spending. But with the card, it looks offer all of that. <br> - The visual aspect of the screen helps you monitor your spending. <br> - The card helps me think ohead. It says what you have on that meter. <br> - I took out the cord ofter reaching the limit thinking that they'd be monitoring me. You never know At the $T A B$, if you win $\$ 10$, you sign a stot dec and you have to acknowledge it on your tox return. So I was a bit concemed that ifyou won money, there's a record of it. So people will know if someone is a problem gombier. <br> - Say you go to the bank You drow out five by $\$ 20$. Then you look at the money ond then you soy where did that money go. You don't think. You have everything in your broin, except for the money youre spending. The visulal ospect of seeing the screen helps you monitor your spending. <br> - It's good to see what you've got on that meter. <br> - The card helps me think ohead. ti's got to. It think it's just says the amount on the meter. |
| Players who did not see harm-minimisation benefits or did not believed they needed limits | - I'm in charge of my own gaming. One week I may want to spend $\$ 200$ and then next only $\$ 50$. So the limits oren't something thot I really need. <br> - I can't honestly remember if I set a limit. I wos mainly interested in the cord. <br> - Im the some (l play to my limits). We only spend whot we con offord. We've poid oll the bills ond then I know how much ive got left over. We also play Texas Holdem poker. I don't really feel like Ineed limits. We rely on each other (os husbond and wife). We just say thot's enough. Since weve paid the house off, it's eosier and youre free. We don't have the same finonciol commitments (Wife who plays pokies with her husbond) <br> - Cord bosed gaming dion't help me ot all I only take whot I'm going to spend. So 1 keep track of it anyway. The card wos only convenience for $m e$. <br> - I set a limit but I don't know why. I set a limit and then as soon as I reach it, I leave. My partner ond I ore doing well and we don't have $k \mathrm{dd}$. So we have a good week and we go down to smash a mochine. Sometimes we put $\$ 200-250$ through. If we get $\$ 300$ back we put it back in our pocket <br> - Thoven't got olimit on mine-1 limit myself (ond don't need one), even though 1 don't hove a (card based) imit. <br> - It's neutral or no effect for me. But it's becouse I'm not a regular ployer. <br> - It doesn't moke much difference to me. Ny porner dances every Saturdoy night and I don't, so I play the pokies. I bring $\$ 20$ and that's it. |

While it is difficult to objectively validate such a claim, several players expressed the view that problem gamblers would not want to use a gaming card. Some players who knew 'big punters' also made mention that such players appeared disinterested in signing-on for the gaming card. Specific comments included:
-- Idon't think problem gamblers would see any benefits. I haver't seen ony big gamblers go for the cord.
-. None of the big gamblers seem to have it.
-- I saw a lady who lives olone and she has a cot. She asked me one night to get her \$50 in change and then asked me again. I bet the cat didn't get fed that night. She didn't have a card, but she looked like she really needed one.
-• Ireckon problem gomblers won't take it up at all, as they don't think they have a problem. If people do have a problem, they won't use it. Problem gamblers don't want monitoring. But maybe they con be made to use the card as a compulsory measure. I've spoken to my problem gambling mate about the card. He just said he'd pull it out and go on. He ploys here and knows obout it, but didn't wont it.

How gaming card was perceived to affect time spent gaming

Findings showing how players believed the new gaming card affected the total time they spent gaming (a perception only) are shown in Figure 3. While most players believed it had no overall impact on the time spent playing EGMs ( $64 \%$ overall), $22 \%$ of higher risk gamblers reported spending a little more time playing the pokies since obtaining the card.

This may be attributable to the 'novelty effect' of the new gaming card or due to greater satisfaction with EGM play given the benefts of the gaming card. It is similarly interesting to note that recreational players were slightly more likely to report spending less time on the pokies since using the card (31\%), compared to higher-risk players (27\%). However, the small sample size needs consideration in this context.

Figure 3. Whether the gaming card was percelved to affect the time spent on pokies play - BY CPGSI RISK STATUS ( $\mathrm{N}=22$, September 2008) ${ }^{\text {a }}$

a. Question - lid like you to now indicote to whot degree you believe that using the gaming card affected the
time you spent ploying the pokies? (or pemaps it had no effect) (Base: All cord-based plovers)
time you spent playing the pokies? (or perfops it had no effect) (Base: All cord-based players)

How gaming card was perceived to affect total money spent gaming

The impact of card-based gaming on players total spending on gaming (again based on a perceived impact) is presented in Figure 4. While 73\% of players overall perceived no impacts on spending, $33 \%$ of higher-risk players reported that the card reduced their gaming spending a little and $23 \%$ of recreational gamblers reported that the card reduced their gaming spending a lot. This may possibly be due to the card increasing gambler awareness of their spending during play.

Figure 4. Whether the gaming card was perceived to affect the total money spent on pokies play - BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\mathbf{a}}$

a. Question - l'd like you to now indicate to what degree you believe that using the gaming card offected the total money you spent ploying the pokies? (or perhaps it had no effect) (Base: All card-based ployers)

How gaming card was perceived to encourage players to think more actively about spend limits

Findings highlighting the impacts of card-based gaming on gambler inclination to think about spend limits during EGM play are presented in Figure 5. Interestingly, $46 \%$ of recreational gamblers believed using the card led them to think either a little more ( $23 \%$ ) or a lot more ( $23 \%$ ) about their gaming spend limits. Moreover, $33 \%$ of higherrisk gamblers believed that the card encouraged them to think 'a little more' about their spending and $11 \%$ 'a lot more'.

Figure 5. Whether the gaming card was perceived to encourage players to think more actively about spend limits - BY CPGSI RISK STATUS ( $\mathbf{N}=22$, September 2008) ${ }^{\text {a }}$

a. Question - I'd like you to now indicate to what degree you believe that using the goming cord affected the total money you spent ploying the pokjes? (or perhaps it had no effect) (Base: All cardbased ployers)

Whether gaming card led to a preference for the Sandgate RSL

Whether the card-based gaming led players to show a preference for play at the Sandgate RSL. is presented in Figure 6. While 4I\% of players reported no impact, it was interesting to note a slight trend for the card to increase player preferences for the Sandgate venue. This may once again be attributed to the novelty effect of the card, the benefits of the card and possibly also the media associated with the card trial,

Figure 6. Whether the gaming card led to a preference for the Sandgate RSL BY CPGSI RISK STATUS ( $\mathbf{N}=22$, September 2008) ${ }^{\text {a }}$
Whether the gaming card led to a player preference for the Sandgate RSL

o. Question - To whot degree does the gaming cord moke you prefer the Sandgate RSL versus other venues for pokies ploy? (or perhaps it had no effect) (Base: All cordbosed ployers)

Type of poker machine gaming which makes it easier to keep track of spending

Player views about the type of gaming (regular versus card-based) which makes it easiest to track spending are presented in Figure 7. There was a clear trend for players not to mention 'regular gaming' (without cards) and a trend for most to prefer cardbased gaming ( $67 \%$ of higher-risk gamblers and $54 \%$ of recreational gamblers). This result once again undoubtedly reflects the overall convenience of card-based gaming reported by players.

Figure 7. Type of poker machine gaming which makes it easier to keep track of spending - BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

Whether the gaming card was percelved to affect the tlme spent on pokies play

a. Question - Which type of poker mochine goming do you believe mokes it eosier to keep track of ond monitor your pokjes spending? (Base: All cord-based players)

Unlike the first trial where some players felt marginally concerned about the safety of their money on the gaming card, it was interesting to note that players in the current trial felt very confident with the integrity and safety of the new card. Losing money or lack of confidence in the card to track money were not on the minds of most players. Specific comments highlighting confidence in the safety and integrity of the card from a player perspective included:

- I feel my money is safe. If you lose your cord, they need your PIN number to get to your money on the card.
- I won $\$ 540$, got excited and pressed collect and it stuffed up the card. Then I asked the person on the kiosk to put it on the cord, so I didn't get mugged. (ie. putting money on the cord was viewed a safer option)
* I think the money is safe on the card.
- Ileave money on the card as I'm coming back
- I haven't even thought about the sofety of my money. I guess it seems quite fine.

## Player experiences with limits and warnings

Recall of initial limits

Player recall of initial limits selected during the card set-up process - presented by the CPGSI risk status of each player - is shown in Table 5 . This should be interpreted largely qualitatively, given the small sample size. As indicated by the self-report data, most players found 't easier to understand the concept of a 'nett daily spend limit' and found it slightly more conceptually difficult to understand the concepts of a 'maximum card balance' limit and a 'transfer limit'.

Reflecting this, when asked about their recall of transfer limits (from card to EGM) during focus groups, comments included:
-. That transfer limit didn't make a whole lot of sense to me. It's probably good for others though.
-- I found it useful. But I hear that most didn't.

Similarly, comments about the maximum card limit included:
-• I didn't really know about that one
-. I can't really even recall setting that at oll. What is it again?

Despite some very minor confusion over balance and transfer limits, compared to the marked confusion over limits in the first precommitment trial, players generally had a significantly better understanding of the available limit options. In this respect, the simplicity of the product design is a key strength of the eBet precommitment system.

Table 5. PRELIMINARY limits set by players after sign-up for card-based gaming - BY CPGSI RISK STATUS (N=22)

| crestiris categony | Limit set ornett daily expenditure | 1 Ifiluset for maximum ctid bathice | Efintiset for defaut transter anoumt. |

|  | 60 | 60 | 60 |
|  | No limit set | Didn't recoll | Didn't recoll |
|  | - 2 out of 8 players reported a limit | - most players didn't recall the card balance limit | - most players didn't recall the card balance limit |
| Problem gamblers | 100 | 500 | 50 |
|  | - Only known PG set a $\$ 100$ limit | - $\$ 500$ card balance was set | - PG chose a $\$ 50$ transfer limit |

Impact of warnings

Players were also asked to make comment about not only whether they had received warnings during card-based gaming, but also the impact of those warnings on the extent to which players adhered to their precommitted limits.

Interestingly, even if they didn't lead to players 'stopping' their play, the warnings triggered through card-based play (ie. on reaching the nett daily spend limit) were seen by most players as quite useful. Comments included:
-. I reached my limit ond it scored the hell out of me. I thought $\$ 100$ and thought how did I lose oll of that? I went home and said that's it.
-. It made me think and realise how much I put in. It made me slow down a bit and think how much I put back in after a win. Alhough I did keep playing.

- I stopped playing on reaching my limit. But then my wife gave me on extro $\$ 20$ notel
-" I was shocked as I didn't realise how I'd gone through that much.
-. It just made me more oware. But it didn't worry me.
-a It shocked me as I hadn't played that long.

To what degree players thought about changing limits or desired additional limits

In total, of all of the players responding to the survey, $100 \%$ reported never thinking about increasing their daily spend limit on the gaming card during the trial period (two players also provided a 'don't know' response).

Analysis of eBet systems data also showed that only four players increased their card limit during the trial and one of this same group of players also decreased their card limit following an earlier increase.

Player interest in the concept of an additional weekly, monthly or annual limit, in addition to a nett daily spend limit, is presented in Figure 8. Interestingly and as observed in the first precommitment trial in 2004, most players were not interested in additional limits over a longer period of time.

It's also interesting to observe, however, that higher-risk gamblers (based on the CPGSI) were more so interested in additional limits, compared to lower-risk gamblers. Indeed, $44 \%$ of higher-risk gamblers were either 'quite' or 'somewhat' interested, compared to only $23 \%$ in total for recreational gamblers.

Figure 8. Interest in concept of an additional weekly, monthly or annual limit BY CPGSI RISK STATUS ( $\mathbf{N}=22$, September 2008) ${ }^{\text {a }}$

Interest In concept of an additional weekly, monthly or annual limit, In conjunction with a dally spend limit on the gaming card

[^3]The suggested basis of the limits is presented in Figure 9. As also confirmed in the early precommitment trial, most players didn't want to think about long range planning for their gaming expenditure and generally were happy with shorter limit terms. In particular, monthly limits were most strongly preferred ( $55 \%$ of players) and particularly preferred by higher-risk gamblers (67\%).

Figure 9. Basis of additional limits suggested by players BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

Basls of addittional limits suggested by players using the card-based gaming

a. Question - What type of additional limit would be most useful for your gaming card?
(Base: All cord-bosed players)

Expenditure statements

Whether player received warnings

As also confirmed by the venue, card-based gaming players reported no requests for expenditure statements during the trial period. Most players did not believe that they needed to track their spending to that level, but believed it was a good option for other players. Some players also reported an interest in accessing a statement for novelty value - just to see what you get.

Based on self-report survey data, player recall of receiving warnings during card-based play (ie. on reaching limits) is presented in Figure 10. As shown, 44\% of higher-risk gamblers and $69 \%$ of recreational gamblers reported receiving no warnings during card-based play. Higher-risk players would naturally receive more warnings, due to their typical more frequent patterns of play.

Figure 10. Whether any warnings about reaching limits were recalled during card use - BY CPGSi RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

## Whether players received warnings about reaching their limits during the trial

| Overall |
| :---: |
| Higher-risk gamblers (Scores 3 or over) |
| Recreational gamblers (Scores 0-2) |

[^4]Impact of warnings

Player reported impacts of warnings received during the card-based trial are presented in Figure 11. Interestingly, 63\% of players overall believed that receiving warnings led them to think about their expenditure, to think about the affordability of their gambling and generally helped them to keep to their spend limits. However, card-based gaming had a much lesser impact on player inclination to think about the time spent on pokies (only $38 \%$ strongly agreed). This further suggests that time limits are less important to most players.

Figure II. Overall impact of warnings received during the trial BY CPGSI RISK STATUS (N=8, September 2008) ${ }^{\text {a }}$

[^5]While only based on small numbers, results by CPGSI risk status are presented in Table 6. While small samples need to be interpreted with caution, it was apparent that higher-risk gamblers were generally more likely to be triggered to think more about their gaming affordability limits and spending when a warning occurred (even about time spent gambling for that matter).

This of course does not imply that such players will necessarily cease to play once a limit is reached, however, it does suggest that card-based gaming may have a positive impact on encouraging players to think about their limits.

Table 6. Overall impact of warnings received during the trial - BY CPGSI RISK STATUS (N=8, September 2008) ${ }^{\text {a }}$

[^6]As part of the survey, players were also asked about their views on the concept of only being able to change card-based limits after a 24 hr cooling-off period. Key findings are presented in Figure 12. As shown, 64\% of players supported this design feature with minimal differences observed across higher-risk and recreational gamblers.

Figure 12. Player views about the $\mathbf{2 4}$ hour cooling off period BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

[^7]Whether players reverted to regular gaming (forgot to use card)

Given that players can still play card-based gaming and regular cash-based gaming concurrently, players were asked about how often they reverted back to regular gaming during the card-based trial. Results are presented in Figure 13.

As shown, it is apparent that some players did revert back to regular gaming and hence, did not always consistently use their card. In this context, it should of course be considered that this data is largely based on self-report (ie. there is no way of even discerning cashless from regular gaming in eBet system data).

Figure 13. Whether players reverted to regular gaming during the trial BY CPGSI RISK STATUS ( $\mathbf{N}=\mathbf{2 2}$, September 2008) ${ }^{\text {a }}$

How many times players reverted back to normal cash based gaming during the trial

|  | Overall |
| :---: | :---: |
|  | Higher-risk gamblers (Scores 3 or over) |
|  | Recreational gamblers (Scores 0-2) |

[^8]Reasons player reverted to regular gaming

The single major reason why players reverted back to cash-based play during the cardbased trial is presented in Figure 14. Interestingly, the major reason was that the card 'ran out of money' ( $42 \%$ of players reverting to regular gaming) or that there was a problem with the card ( $33 \%$ of players). Interestingly, staff being 'too busy' to assist was also mentioned as a reason (17\%).

In contrast, only $8 \%$ of players overall stopped using their card simply because they wanted to stop the warnings. Interestingly, however, higher-risk gamblers were generally more likely to report this as a reason (14\%), compared to recreational gamblers ( $0 \%$ ). This is no doubt also because of the fact that such players would be likely to receive more warnings.

Figure 14. Single main reason player went back to regular cash based play BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

[^9]
## Future directions for card-based gaming

Whether cards should be made voluntary or compulsory

As part of focus groups, participants were asked to provide views on future directions for card-based gaming. Interestingly, most players saw some beneft in venues offering card-based gaming as an option for players, yet most people did not want to see it as compulsory.

Findings from the card-based player survey are presented in Figure 15. As evident, $68 \%$ of players believed that it should be offered as a voluntary option and only $5 \%$ saw no reason for venues to offer card-based gaming. A further 27\% also felt that compulsory use may be warranted. This was also more strongly supported by higher-risk gamblers (33\%) compared to recreational gamblers ( $23 \%$ ).

Figure I5. Player views about where cards should be made compulsory or voluntary BY CPGSI RISK STATUS (N=22, September 2008) ${ }^{\text {a }}$

Whether gaming cards should be made compulsory or voluntary

[^10]Player comments about the prospect of offering card-based gaming into the future included:
-• I think that it should be in every club. But I don't know if mandatory is the way to go.

- I'd like to see it in every club. It would be handy to be able to dobble (ond know what you're spending across clubs).
- I think hotels should be made to use it. That's where the problem gomblers go. I went to a hotel and sat next to a womon who wasn't monitoring her spending at all while drinking. She'd done over $\$ 80$ on the machine.
-. I think that it should really be up to the individual (regarding the decision to use cords and limits).
-* I think that it should be compulsory for everyone across every single RSL The link the jackpots, so why con't they link the cords.
- I think counsellors should put people on the cards if they are having problems. Although selling it to the Austrolion public may be difficult, as it will probobly be seen as big brother. They tried the Austrolia Card.
- If they made it compulsory (in Queenslond), I think the problem gomblers would just go to Tweed Heads.
-. I think that they should send a compulsory statement to everyone. It would only be useful if everyone had to get it. People would panic and say holly hell. It would be useful to know thot youre down $\$ 1200$ for the year.
*- I don't think that problem gamblers will choose a reasonable limit. For people to chonge their behoviour, they have to wont to change. They need to say pleose help me. So 1 doubt that they would choose a proper limit My (problem gambling) mate is great until his kit is emply. He's more likely to think he's a problem gambler at the end of his pay cycle.
- It's a great tool for responsible gomblers. It's good, because you're olready spending what you con afford and it just helps you monitor your spending. The convenience is good as well.
- I just love it for its comvenience.
- I wonder if the older ones will forget their PIN.
- A lot of older people won't feel comfortable using card technology. I think thot's the biggest challenge.
- I think that machines should be designed to have a print out. No - I didn't get a statement at all. I may get one. Like with my bank card, I like to allocate a certain amount to my leisure spending. It would be handy to have it available on the machine.
- It would be onnoying if you had multiple cards. But one cord then agoin is just like the Australia cord. It's a goodidea, but what chance have we got in getting thot off the ground.

# Key findings of usability testing of the card-based gaming product 

Overview

As part of the product evaluation, $\mathrm{N}=10$ usability tests were undertaken with EGM players who had not used the gaming card. A $\$ 50$ voucher was offered for conduct of each usability test. Players were approached about participating in the usability testing through an intercept methodology. The instrument used to guide the usability testing is presented in Appendix B - Usability testing of card.

Key findings from the usability testing exercise are presented as follows:

- 1) Player feedback on card-based gaming information and sign-up
-0 2) Player understanding and feedback regarding card-based limits
-0 3) Player feedback on usability of card-based gaming
-• 4) Player feedback and understanding regarding card-based gaming statement

}

Card-based gaming information

Card and Daily Limit Adjustment application forms

A sample of ten users was asked to read the card-based gaming information pamphlet and was asked to comment on the usefulness and ease of understanding of the material. In general, users found written information useful and easy to understand. However, three users suggested that additional information would be beneficial to encourage full consideration of the value and implications of the card. For example, one user stated that additional information on how loyalty points could be accumulated and converted to gaming credit through use of the card. One user suggested that the card limits could be better explained, particularly the term "Nett", and its difference from "Gross" expenditure.

Interestingly, another user noted that the information could provide additional information on the potential negative consequences of gambling and how the gaming card could help prevent these consequences through structured management of personal gaming expenditure.

The ten users completed the sign-up and "Daily Nett Expenditure" limit adjustment forms and were asked to comment on ease and speed of form completion. As suggested by data in Table 8, the majority of surveyed users found the forms quick and easy to complete. However, several users noted that the application form could be set out in a way that would make it easier to understand and complete. Specifically, the column layout of the application form confused some users. For example, when filling out the application form, several users placed their sumname in the "Other Names" box in the left hand column, instead of the box entitles "Card Account Surname Name" box located on the right of the page. These users said that they were accustomed to filling out forms from top to bottom, rather than left to right.

Table 8. Mean ratings relating to card-based gaming information and sign-up USABILITY TESTING ( $\mathrm{N}=10$, November 2008) ${ }^{\text {a }}$

a. Questions - QI-How would you rate overoll ease of form completion? Q2 - How would you rate overall time to sign-up for cord-based goming?, Q3 - How easy or dificult was it to understond the supplied written informotion provided to assist ployers during sign up? (Bose - All respondents)

Three of the male users interviewed found the application process too slow and difficult to complete due to the form structure and terminology. These users were particularly unclear about the term "Nett" on the "Application To Adjust Current Card-based Account Daily Net Expenditure" form.

One user stated that he had to "read the words on the forms several times" to understand what they meant and how the card amounts would be adjusted. Other than the term "Nett", the user was unsure about the implications of terms such as "default values" and "account configurations".

While the user understood the general meaning of these terms, he stated that it was unclear how changes to "default values" and the limitations of the card's
"configuration" would impact on the use and uitimate benefits of the card. Despite this, the user appeared to better understand the definition of nett dally expenditure after re-reading the card-based gaming information sheet.

## 2) $P L A Y E R U N D E R S T A N D I N G A N D F E E B A C K$ REGARDINGCARD-BASEDLIMITS

Understanding of limit types

The surveyed users generally found it easy to understand the three types of limits associated with the gaming card. While most users could not recall the precise limit terminology (e.g. maximum card account limit), they could describe the limits in a way that represented their type and intent (e.g. Card limit or Total limit).

Users had a very clear understanding of the Nett Daily Expenditure limit and the Maximum Card Account limit. Table 9 shows that users rated these limits as "easy" or "very easy" to understand. Ratings were supported by comments which indicated that users had a sound understanding of the nature, purpose and value of the limits. For example, when asked if and why they would (or wouldn't) set a daily spend limit, users showed a strong understanding that the limit would restrict how much of the card balance could be spent on any single date. Likewise, the concept of a "total" or "maximum" amount of money that the card could hold was familiar to the users.

Table 9. Mean ratings relating to ease of understanding card-based gaming limits -
USABILITY TESTING ( $\mathrm{N}=10$, November 2008) ${ }^{\text {a }}$

| Ageand Gender of Respondent | A. Net dally expenditure Ilmit | Be Transfer IImit <br> dincult 55 | C. Maxcard account balance limit asy |
| :---: | :---: | :---: | :---: |
| Under 50, Male | 5.0 | 4.0 | 5.0 |
| Over 50, Male | 5.0 | 3.7 | 4.3 |
| Under 50, Female | 5.0 | 4.3 | 4.7 |
| Over 50, Female | 4.5 | 3.5 | 4.5 |
| Overall mean | 4.9 | 3.9 | 4.6 |

a. Question - How easy or difficult wos it for the ployer to understand the concept of the following limits?, (Base - All respondents)

The limit that was least understood was the Transfer limit. While the nature of the limit was understood relatively easily (i.e. what the limit entails), some users could not see the purpose or value of the limit in monitoring and controlling gambling spend. For example, one participant stated that "I understond the transfer limit, but l'm not sure how it would help me", suggesting that she did not consider the transfer limit as a deterrent to overspending on gambling.

## Adoption of limit types

Table 10 shows that, when considered individually, each limit type would be adopted by eight out of the ten users surveyed if they used the gaming card. However, when looking at limit setting overall, only five of the ten individual users indicated that they would use the three limit types. The remaining five users said they would use one or two of the limit types, but not all of them.

Table 10. Choice of gaming card limit types and amounts by respondent USABILITY TESTING ( $\mathrm{N}=10$, November 2008) ${ }^{\text {a }}$

a. Questions - QI - In a real life situation, would you set a Daily Spend Limit? If yes, how much would you set?

Q2 - In a real life situation, would you set a Transfer Limit' If yes, how much would you set? Q3 - In a real life situation, would you set a Cord Bolance Limit? If yes, how much would you set? (Base - All respondents)

Levels of limits

Motivational drivers for limit use and levels

This suggests that users would utilise limits flexibly to suit their own needs and habits. For example, one user could see the value of having a Maximum Card Account limit to control overall spending, but did not want to set a daily limit as he wanted the flexibility to spend as much or as little as he wanted to (within the maximum limit) in any one day. Likewise, the user could not see the value in setting a Transfer Limit indicating that he "might as well transfer the whole daily omount".

Conversely, another user stated that he would set Daily and Transfer limits, but would not set a Card Account limit. The user stated that he would set these limits because he would not want to spend more than his daily limit and wouldn't want to use all of the daily amount at once, but didn't think a card limit was valuable for him suggesting that "if I can't control what I spend, the card limit wouldn't help me".

Table 10 also shows the limits, if adopted, that each individual user would set. While adoption of limits varied, the range of limits that users would set was relatively narrow. For example, the limits set by the eight users who indicated that they would use a Daily Limit ranged from $\$ 50$ to $\$ 100$. Similarly, five out of the eight users who said they would adopt a Card limit chose $\$ 1000$ as the limit.

The data might suggest that there is a common or consistent view about what constitutes "sensible" or "reasonable" daily and card limits which facilitate entertainment, while managing risk of overspending and unacceptable loss or harm.

The limit which varied the most was the Transfer Limit, with proposed levels ranging from $\$ 2$ and $\$ 100$ for the eight users who indicated that they would set a transfer limit. As discussed in the following section, the choice of Transfer limit was generally determined by the user's daily limit (i.e. the lower the daily limit, the lower the transfer limit) and the user's perception about how much machine credit was needed to "have a good time" and/or to have a reasonable chance of achieving a win.

Overall, users had difficulty identifying precisely how they chose their limits, with most users stating that they "wouldn't want to spend too much", but being unable to specify the process they used to determine what "too much" entails. In several cases, when asked "Why would you say Yes" to the limit, the users stated that "they just would".

Reasons for non-adoption of limits. Users who said that they would not adopt a particular limit were relatively clear about their reasons for taking this position. For example, the two users who indicated that they would not set a Daily Limit said that they would not want their daily spend to be restricted, allowing them the flexibility to spend what they want when they want (e.g. having more of a 'flutter' on a Friday night).

Users who indicated that they would not set a Transfer Limit suggested that the limit wouldn't help control their spending and would therefore not serve any benefit.
Similarly, the two users who said they would not need a Maximum Card limit said that they would or should be able to track and control their spending, with or without a limit, so there would be no point setting the limit.

Despite the difficulty for most users in identifying their specific motivations for using limit levels, when prompted further, several users gave some indication of the basis for their choice of limit levels. The key factors which drove choice of limits included:
-. Income and links between limits - Income appeared to be a key driver of the setting of levels for the three types of limits. For example, one user who is a fulltime student said that her limited income only allowed her to spend $\$ 10$ a day and $\$ 2$ per transfer. As would be expected, those with full time jobs/incomes tended to set limits at higher levels
-* Budgeting for essential and entertainment expenses - several users indicated that they set their daily limits based on the amount of money they had left over after paying for essential items (e.g. food) and expenses. For example, one user said that she would be happy to spend $\$ 50$ a day on gaming machines because she knows that she would be able to pay for her bills. The ability to separate and use "entertainment money" from other spending, allowing the user to gamble without worrying about financial and related consequences was viewed as a genuine benefit. of the gaming card

* Perceived amount needed to "have fun" - several users indicated that they needed a certain amount of money per day in order to "have fun" and "enjoy the pokies". Based on the sample of users interviewed, this daily amount needed to facilitate adequate entertainment appears to be between $\$ 50$ and $\$ 100$ inclusive. However, the perceived Transfer Limit required to "have fun" varied considerably, with some users indicating that they can "hove fun with very little" (\$2) or could "sit on $\$ 5$ oll day", while another user considered $\$ 20$ to be the minimum
-• Perceived amount needed to win - several users believed that a minimum transfer amount was needed to achieve a reasonable chance of winning on the gaming machine. These users suggested that amounts under $\$ 20$ or $\$ 30$ would not yield sufficient wins to make the experience worthwhile. In these cases, the users, and the limits they chose, appeared to be driven by the likelihood of a win rather than the entertainment gained from the process of playing the gaming machines
* Perceived amount that constitutes "reasonable spending" and "overspending" - there appeared to be some consistency in users' views about what was considered to be a "reasonable" amount to risk or spend on gaming machines and what would constitute having spent "too much". As mentioned earlier, "acceptable" Daily spend appeared to range between $\$ 50$ and $\$ 100$. However, with the exception of one user, there was also general agreement amongst the sample group that they would not want to set a card limit at any more than $\$ 1000$, as spending more than this on gambling would be "too much". Interestingly, the user who said that he would set his card limit at $\$ 2000$ also set a Daily limit (\$200) double that of the average Daily limit and indicated that his card limit is the amount that he would be "prepared to lose". This suggests that the limits are not only related, but, despite subjective differences, are largely driven by what the user considers to be an "acceptable" loss.

Overall interest in gaming card

Table II shows users' level of interest in signing up for and using the gaming card. On average, the sampled users were not interested in using the card at this time, with several users stating that they don't need help to control their spending. For example, the sample of females aged over 50 stated that they considered the card to be a "great idea" but that they wouldn't use the card themselves because they have the discipline to manage how often and how much they gamble. This result is likely to reflect individual preferences of the sampled users, rather than generic interest in the card.

This view may also be influenced by social desirability in that these users appeared to be concemed about the perception that they had a gambling problem and needed "help" to control their spending. One user suggested that, particularly for "problem gamblers", the club could set the limits, rather than leaving the choice to the individual.

Males in the sample were more concerned that the card would limit the their flexibility in how much they could spend on any particular day.

Table II. Mean ratings relating to overall interest in signing up for a gaming card USABILITY TESTING ( $\mathbf{N}=10$, November 2008) ${ }^{\text {a }}$

a. Question - Based on usability of the goming card, how interested are you to take up the cord? (Bose - All respondents)

Some interest in the card was shown by females aged under 50 . Users in this category suggested that the card would help them reduce worry about gambling by separating "spending on the pokies" from spend on other expenses.
3) PLAYER FEEDBACK ON USABILITY OF
$C A R D-B A S E D G A M I N G$

Ease of gaming card use

Users were asked to perform tasks using the gaming card (e.g. card insertion, PIN entry) and asked for feedback on the card's usability. The amount of help they needed to complete the tasks was also observed and recorded as an indication of ease of use.

Results of the ease of use assessment are presented in Table 12. Overall, users completed the majority of tasks with little or no help. All users inserted the card without assistance and all but one user entered the card PIN on the first or second attempt.

Feedback suggested that users who made an error on the first attempts found the numbers on the PIN pad a "bit hard to remember and put in". Several users had to extract the card to look at the PIN, which may suggest that some users could have difficulty remembering the PIN, particularly when it is changed to a secure code. This may also be because people were using a test-card PIN that did not have personal meaning.

Table 12. Mean ratings relating to ease of using gaming card (amount of help player needed) USABILITY TESTING ( $\mathbf{N}=10$, November 2008) ${ }^{\text {a }}$

| Overall mean | 3.8 | 3.4 | 3.5 | 3.1 | 4.0 | 2.8 |

a. Question - How well did the player perform the gaming tasks? (Base - All respondents)

## Transferring credit

Checking card balance

The user who experienced the most difficulty entering the PIN (male, over 50) eventually needed assistance to enter the number. He stated that he had problems remembering the PIN and seeing the number pad. The user noted that he would have found the task substantially easier with his reading glasses.

The sample of males over 50 also had some difficulty understanding the process of placing money on the card using the gaming machine. The primary difficulty was in determining how to transfer money from the machine to the card without taking the card out of the machine. These users suggested that they would prefer to place money on the machine and transfer all of the credit at once by withdrawing the card. All surveyed users found the process of extracting the card with the machine balance easy to understand and perform.

Users from all gender and age groups, except females over 50 , experienced some difficulty checking the card balance. The key issues were the short time that the balance was displayed when inserting the card and how to display the balance while using the card. When asked to check the balance, many users were not sure how to perform the task without assistance, or without transferring additional credit from the card to the machine. One user (male, under 50) was unable to complete the task and stated that he would not want to know the balance unless he was transferring money to the machine. This feedback appeared to have been heavily influenced by frustration with performing the task.

## Statement value and usability

Summary

Users were shown the card statement and asked to provide feedback on its value and ease of use. Table 13 shows responses to the question "How useful is the information on this expenditure sheet?" (I = "not at all useful", $5=$ "very useful"). All users in the sample suggested that the statement was an excellent tool. Several users noted that the statement was clear and was particularly valuable in that it showed all of the spending and related transactions on one concise page. Interestingly, users also described the statement as "a bit scary" indicating that, while a little confronting, the visibility of the information would prevent players from "escaping the truth" about what they had spent on gaming machines.

Table 13. Mean ratings relating to usefulness of expenditure statement USABILITY TESTING ( $\mathrm{N}=10$, November 2008) ${ }^{\text {a }}$

| Aespondent Age and Gender | Percenced iseflifess of the expendfure statement 1hnt at allusefil $5=1$ eryuscral |
| :---: | :---: |
| Under 50, Male | 3.50 |
| Over 50, Male | 4.33 |
| Under 50, Female | 5.00 |
| Over 50, Female | 4.50 |
| Overall mean | 4.33 |

a. Question - How useful is the information on the expenditure statement? (Base - All respondents)

Only one user had some difficulty reading the statement on the first attempt. The issue related primarily to understanding of terminology (nett vs gross spend). However, the user found the statement easy to use and beneficial once the key terms were explained.

One user suggested that the only limitation of the statement was that it only displayed the player's gaming machine spend at the Sandgate RSL. The user noted that he often went to multiple gaming outlets, often during the same week. He noted that it would be beneficial to have one card that could be used at any gaming venue, and a statement that specified all money spent using the gaming card.

Findings of usability testing highlight that the eBet product is very user-friendly and the sign-up process is not seen as overly burdensome by prospective players. Most users of the card also saw some harm-minimisation benefits in card-based gaming and viewed the product as offering high levels of convenience to players.

## Player expenditure on card-based gaming

In total, following provision of card-based gaming EGM data by eBet, a total of 21,310 EGM transactional records were quantitatively analysed to distil key play and spending patterns in data. As to be expected, this was a significant task and much of the analysis had to be performed by hand-coding data manually through the use of spreadsheets.

Data was de-identified to protect player anonymity prior to commencement of analysis. The purpose of data analysis was to gather insight into the extent of player experience with card-based gaming post-implementation and to explore player patterns of play and behaviours using data before and after cashless gaming.

It should be noted that there are naturally some limitations in analysing this data. Based on advice from eBet, once players commence cashless (using their existing loyalty card), it is not possible to determine when players use cash (without the card) and when players just use their card for loyalty points without the use of cashless gaming. It is similarly clearly not possible to know when players have ceased using the card.

For this reason, an assumption has been made that all data relating to use of cashless gaming is assumed to be cashless. This is a necessary aspect to conducting exploratory analysis. The inability to separate cashless from non-cashless play is an design issue specific to the eBet system. For this reason, key trends should only be considered indicative and exploratory rather than definitive in nature.

It should also be noted that the current EGM system data set has a slightly different time frame base compared to the player uptake data set and for this reason, minor discrepancies in data may be observed.

Within this context, the data extracted by eBet was taken from 1-09-2007 to 31-082008 to allow comparison of trends before and following card-based gaming. Given that individual players each took up card-based gaming at different time points, individual sign-up dates were used to define the time frames relating to before and following card-based gaming implementation.

In summary, exploratory data analysis in this section includes:
-. Player use of card-based gaming during the six month trial period
-0 Comparison of behaviour before and after implementation of cardbased gaming
-. Player experiences with limits during the trial
-. Other interesting insights

## Player use of card-based gaming during the six month trial period

Days of card use

Findings relating to the days of use of card during the trial are presented in Table 14. The 64 card-based players (based on March 3-August 31, 2008 ${ }^{1}$ ) visited the Sandgate to play the pokies using the card over a total of 1,392 days during the six month trial period. This equates to each player using the new gaming card at an average of 21.75 days during the trial.

This also highlights that most players had good usage of the gaming card and thus could test the card well from a player usability perspective. Card use ranged from no use at all of the card (ie. the player signed-up and did not use the card - this was the situation in the case of four players) to a total of 165 days of card use during the trial period. It is also interesting to note that nearly $47 \%$ of players had at least I 3 days of card-use during the trial period.

Table 14. Days of player use of the card-based gaming card during the trial ( $\mathrm{N}=64$ players) - MARCH 3-AUGUST 31, 2008 ${ }^{\text {a }}$

| Days of itse of card dining the trial | N | \% playevs |
| :---: | :---: | :---: |
| No use of card | 4 | 6.2 |
| 1-6 days of use | 19 | 29.7 |
| 7-12 days of use | 11 | 17.2 |
| 13-24 days of use | 14 | 21.9 |
| 25 or more days of use | 16 | 25.0 |
| Average use | 21.75 days per player |  |
| Range of use (days) | No use (4 players) - 165 days of use |  |
| Total days of card-use (all players) | 1,392 days during the trial |  |

a. Base - Based on analysis of raw eBet EGM play data (supplied by eBet)

1. Also note the slightly different date stamp from the card uptake data (which ran into September).

## Sessions of

 card useAs part of the data analysis, the average number of sessions of card use per day per player were calculated. Findings are presented in Table 15. A session is defined as a period of play from card insertion to withdrawal of the card by the player. This implies that the average player may have up a large number of sessions per hour of EGM play.

In total, 8,121 sessions were observed from start to the end of the official trial period across all 64 players (including the four that elected to sign-up and then not use their card). This calculated to an average of 6.45 card sessions per day per player.

Table 15. Sessions of player use per day of the card-based gaming card during the trial ( $\mathrm{N}=64$ players) - MARCH 3-AUGUST 31, 2008 ${ }^{\text {a }}$

Turnover during trial period

The turnover played during the six month trial was also calculated. Results are presented in Table 16. In this context, it should be noted that turnover includes wins and losses and thus is only money turned-over and NOT money spent.

In total, from March 3 to August 31 2008, a total of $\$ 444,934$. 16 was turned-over in EGMs by players using card-based gaming. This equated to an average turnover of $\$ 7,415.57$ per player. Once again, this shows that players had good use of the cardbased gaming card during the trial period.

Table 16. EGM turnover for players using card-based gaming card during the trial ( $\mathrm{N}=64$ players) - MARCH 3-AUGUST 31, 2008 ${ }^{\text {a }}$

| Turnover of \$5001 or more | 23 | 35.9 |
| Average turnover | \$7,415.57 |  |
| Range of turnover | \$0-\$53,478.95 |  |
| Total turnover for the trial period (all players) | \$444,934.16 |  |

a. Base - Based on analysis of raw eBet EGM play data (supplied by eBet)
b. This includes the four players who did not use their cord plus one player who inserted their cord and did not turnover ony money on the EGM using the card.

Overall and nett player expenditure per player per day

Player nett expenditure for the card-based trial period is presented in Table 17. As shown, a total of $\$ 55,375,65$ was spent by players using the card-based gaming card at the Sandgate RSL during the trial period (based on the 64 players). This equates to a nett expenditure of approximately $\$ 923$ per player during the trial. Findings also showed that nearly $47 \%$ of players spent $\$ 500$ or less.

Table 17. Player nett expenditure using card-based gaming card during the trial ( $\mathrm{N}=64$ players) - MARCH 3-AUGUST 31, 2008 ${ }^{\text {a }}$

| Leyc of inet expendure (cill of pocket spendig on EGMS) | N | \% phayers |
| :---: | :---: | :---: |
| No expenditure | 5 | 7.8 |
| Nett expenditure of \$500 or less | 30 | 46.9 |

| Nett expenditure of \$1001-\$3000 | 11 | 17.2 |
| Nett expenditure of \$3001-\$5000 | 5 | 7.8 |
| Nett expenditure of \$5001 or more | 1 | 1.6 |
| Earned money from wins (ie. ahead overall) | 2 | 3.1 |
| Average nett expenditure per player | \$922.93 |  |
| Range of nett expenditure during trial | \$0-\$6,846.97 |  |
| Total nett expenditure for the trial period (all players) | \$55,375.65 |  |

a. Base - Based on analysis of row eBet EGM ploy data (supplied by eBet)

Player nett expenditure for the card-based trial period - calculated on a spend per. player per day of play basis - is presented in Table 18. On average, players spent $\$ 48.10$ for each day of card-based play during the trial. Nett expenditure per also ranged from making a 'profft' (due to winnings) through to a loss of an average of $\$ 326$ per player per day.

Table 18. Player nett expenditure per day using card-based gaming card during the trial ( $\mathrm{N}=64$ players) - MARCH 3-AUGUST 31, 2008 ${ }^{\text {a }}$

Time spent on card-based gaming

The time players spent on card-based gaming sessions during the trial period is presented in Table 19. This shows that most players spent a total of between 50001000 minutes on card-based gaming since product implementation.

Table 19. Player time expenditure in minutes using card-based gaming card during the trial ( $\mathrm{N}=64$ players) - MARCH 3-AUGUST 31, 2008

| Tine spent in infutes on cards based ganlug diaring the trin peridal | N | \%phyers |
| :---: | :---: | :---: |
| No time spent at all | 4 | 6.2 |
| Under 250 minutes | 16 | 25.0 |
| 250-500 minutes | 6 | 9.4 |
| 500-1000 minutes | 36 | 56.2 |
| 1000 minutes or over | 2 | 3.I |
| Average time expenditure per player (for full trial period) | Mean-2015.6 minutes per player Mode - 500-1000 minutes |  |
| Range of time expenditure per player | 0 to 21,507.53 minutes full tria! |  |

Detailed analysis of data relating to individual time per EGM play session also shows that a number of cards have been presumably left in EGMs overnight or forgotten following EGM play, After raising this observation with eBet, it was confirmed that this implies that players are likely to have left the card in the venue.

It was also understood from discussions that PIN numbers would remain active during this period. On this basis, it would be useful to request future precommitment product providers to implement a PIN time-out feature to ensure that player card funds remain protected. In the same way, venues should be required to check for lost cards as a further consumer protection measure (and perhaps keep a log on such checks as part of compliance requirements). It should, of course be noted, however, that this only occurred in a very small percent of overall transactions.

Examples of time logs that suggest cards were 'forgotten' are below. These are only examples where 'play' was logged to be 8 hrs or more - ie. 480 minutes. All examples are presented in minutes with the relevant player card numbers in BLUE in brackets:
-• 578 (Number 1832)

- 675.33 (Number 1222)

-* 5468.88 (Number 8163)

## Comparison of behaviour before and after implementation of card-based gaming

Changes in the number of EGM sessions

A comparison of the number of EGM sessions per day before and after card-based gaming implementation at the Sandgate RSL is presented in Table 20. In total, overall sessions per day of play increased slightly since implementation of card-based gaming at the Sandgate. This involved an increase from 383.2 sessions per day before card-based gaming to 386.7 sessions per day following card-based implementation.

While it is difficult to attribute this change to card-based gaming alone, it is possible that players are increasing sessions per day, given the flexibility of card-based gaming in moving easily from EGM to EGM. This was also reflected as a key benefit during focus groups and surveys with players and hence, it is plausible explanation for the observed difference. The first precommitment trial also made a similar observation.

Changes in
EGM turnover

Changes in EGM turnover before and following implementation of card-based gaming are presented in Table 21. Findings showed that EGM turnover reduced slightly from $\$ 334.04$ to $\$ 319.64$ per player per day following implementation of card-based gaming.

This represents the money turned-over, rather than nett out-of-pocket spending. It is difficult to attribute this solely to card-based gaming in view of the many individual and other variables at play. However, the trend is interesting for comparative purposes and may suggest some influence of both card-based gaming system and precommitment.

Changes in EGM play nett expenditure

Changes in EGM nett expenditure before and following implementation of card-based gaming are shown in Table 22. As shown, expenditure dropped from $\$ 41.97$ to $\$ 39.78$ per player per day since implementation of card-based gaming in March. This represents a decrease in nett expenditure of $5.2 \%$. While it is difficult to once again solely attribute this to card-based gaming, it may be a likely influence.

## Player experiences with limits during the trial

Players who set nett daily spend limits during the trial

Findings of EGM system data analysis revealed that a total of only 18 of 64 card-based players elected to set a limit relating to their card-based gaming during the trial period. Detailed results are presented in Table 23.

This equates to approximately $28 \%$ of players electing to use card-based gaming during the trial. In this context, it should be noted that Sandgate RSL staff reported emphasising the benefits of limits to all players who signed-up for card-based gaming. This may imply that, in real market situations, few players will elect to set limits for their gaming and will particularly not set limits if they are not encouraged (or in the case of benefits NOT being promoted). This may also indirectly suggest that most EGM players see cashless gaming as the key beneft of card-based play (and limits a secondary benefit or in the case of others, a non-existent benefit).

Analysis of the types of limits set also shows that 13 of the 18 players set a limit on initial card sign-up and five players subsequently set a limit after card sign-up. Limits were also generally fairly small figures. Of the 23 limits in total set (bearing in mind that some players set multiple limits), overall analysis showed that:
-. $\mathrm{N}=11$ limits were set at $\$ 50$
-. $\mathrm{N}=9$ limits were set at $\$ 100$ or over
-. $N=3$ limits were set at under $\$ 50$

Only four players elected to change their limits during the trial, with three players increasing their limit and one player increasing then decreasing their limit. Given that players generally show lack of inclination to alter limits once set, this further emphasises the importance of giving players early education about correctly setting limits in the first instance on card sign-up. In the current trial, no information or tips were supplied to influence choice of limits (eg. financial literacy information), however, this could be explored as a further way to ensure appropriate limits.

Potential influence
of precommitment

Findings highlighting the possible influence of precommitted limits on player spending before and following card-based gaming are presented in Table 24. It is interesting that 13 of the 18 players who did set a limit decreased their spending since implementation of precommitment.

This included a nett daily spend decrease from $\$ 64.02$ to $\$ 39.26$ (a total decrease of $\$ 24.77$ per player per day in nett expenditure on EGM play). It should be noted that this also includes one player who did not have a sufficient track record of play before or after card-based gaming (ie. a player who signed-up and hadn't played EGMs at the venue using the card prior to sign-up).

In contrast, in the players who didn't set a limit on their card, the decrease in spending was much more marginal, with nett expenditure decreasing from $\$ 53.26$ per player per day of gaming to only $\$ 51.90$ per player per day.
While difficult to conclusively establish, this may suggest that selection of limits could assist to decrease EGM spending in players. This is also likely to be due to players selecting limits being already much more cognisant of their EGM spending (and possibly more motivated to reduce spending in the first place).

a. Base - Based on analysis of raw eBet EGM play data (supplied by eBet) (Missing data indicoted by period - implies no ploy)

How often players kept to their limits

The next analytical exercise was very extensive and involved manually calculating spend per day for all players who had set a spend limit during the trial. Key results are shown in Table 25 and in detail in Table 26. As there were some players who set a limit and then did not spend money on their card for a day (implying a spend of $\$ 0$ ), such 'daily transactions' were excluded from the analysis.

At a rolled-up level, findings of this detailed analytical exercise showed that, in the case of where limits were set, $57 \%$ of the time player kept to or under their limit, $20 \%$ of the time players were in credit due to winnings and a further $3 \%$ of the time overspent only a very minor amount. In contrast, only $20 \%$ of the time players were over their planned limit.

Taken together, these results suggest that precommitment to a defined spend limit is likely to be associated with keeping roughly to the set spend limit. It should also be noted that this data is based on days of play (for players who set a limit), rather than players (ie. there are only 16 players but a total of 332 days of play).

Table 25. Whether players kept to or under limits based on days of play during card-based gaming ( $\mathrm{N}=16$ players) - MARCH 3-AUGUST 31, 2008 ${ }^{\text {a }}$

| Whether limit was adieted to | Numberoidays ofplay | \% oflays of play |
| :---: | :---: | :---: |
| Kept to limit | 10 | 3 |
| Kept under limit | 179 | 54 |
| Player ahead (under limit) | 65 | 20 |
| Very minor overspend | 11 | 3 |
| Went over limit | 67 | 20 |
| Totals | 332 days | 100 |

a. Based on players who set a limit during card-based goming. Excludes days where EGM expenditure was zero.

Findings also showed slight differences in the average ages of players (refer Table 26). It should be noted that, given that limits were calculated based on days of play, some players were naturally in both the 'kept limit' and 'went over limit' category.
-. Average age of females who kept to or under limit $=45.5$ years ( $\mathrm{N}=5$ females)
-. Average age of males who kept to or under limit $=61.7$ years ( $\mathrm{N}=10$ males)
-0 Average age of females who went over limit=47.5 years ( $\mathrm{N}=4$ females)
-- Average age of males who went over limit $=63.2$ years ( $\mathrm{N}=8$ males)

While difficult to draw definitive conclusions, results may suggest males and females who found it slightly more difficult to keep to limits were slightly older than their counterparts (who kept to limits). Possible explanations may be that slightly older people had more available time and thus were playing EGM to fill in leisure time.

| Average age of males who went over Ilmit $=63.2$ years ( $\mathrm{N}=8$ males) |  |  |  |  |  |  |

a. Based on players who set a limit during cardbosed gaming. Excludes days where EGM expenditure was zero.

Linking spend and attitudinal data

The next analysis involved linking the EGM expenditure data with the survey data for the players who consented to and participated in the card-based player survey. Unfortunately, there were only 6 players who had undertaken a survey, who also had set a spend limit (and had spend data avaliable for analysis). Results are presented in Table 27. For the purpose of this analysis, very minor overspends were considered keeping to limits (ie. overspends of a dollar or so or just even cents).

While only a qualitative analysis can be conducted due to small samples (only 6 players had appropriate EGM spend data and a survey), findings showed the following trends below:

- Non-problem gamblers ( $100 \%$ of days)
- Card 180 - 16 days kept to limit, 0 days over limit
-• Low risk gamblers ( $88 \%$ of days)
Average overspend over limit - $\$ 28.02$
- Card 317-5 days kept to limit, 2 days over limit
- Card 2423-4 days kept to limit, I day over limit
- Card 3692-10 days kept to limit, I day over limit
- Card 6529-31 days kept to limit, 3 days over limit
-* Moderate risk gambler (83\% of days)
Average overspend over limit $-\$ 21.07$
- Card 530-20 days kept to limit, 4 days over limit

## Other interesting insights

Preferred EGM brands of players by CPGSI risk

Findings from play data before and following card-based were also analysed to show the EGM brands most played by players. This was based on sample of $\mathrm{N}=21$ players (who had answered questions of the CPGSI in the survey). Groups were then split to allow some comparison. Non-problem gamblers and low risk gamblers were then combined to form one group and moderate risk and problem gamblers combined to form another group. Results are presented in Table 28.

For the higher risk players (MRs and PGs) preferred EGM brands were 'Spring Carnival' and 'Big Ben'. In contrast, the top two products preferred by the low risk players (nonproblem gamblers and lower risk gamblers) were Red Barron and Mr Woo.

## EGM denomination

 by CPGSI risk statusFindings showing the preferred denominations of EGM players (including summary of play data before and following card-based gaming) are presented in Table 29. Interestingly, preferences were mainly for I cent EGMs across both groups and a similar percentage of play sessions also invoived two and five cent EGMs. It should once again be noted that this is based on sessions of play, rather than percentages of players.

Table 29. Preferred EGM denominations of players who did the card-based survey and had completed the CPGSI (N=2I players) - Play data from August I 2007-August 312008

While it's difficult to say whether the observed decrease in spending is due to implementation of precommitment and card-based gaming, overall metered win data for the Sandgate Region (before and during the trial period) is presented in Table 30. Calculations suggested that metered win decreased from before to during the trial. The average decrease for the Sandgate Region (based on 5 venues) was $0.74 \%$.

While difficult to know with certainty, it is interesting that play nett daily spend decreased $5.2 \%$ comparing both before and following the card-based gaming trial. The limitations of such an analysis do, however, need consideration as this is only regional data and there is no way of also knowing whether players went to other venues during the card-based gaming period.

Table 30. Metered Win shifts for region of Sandgate in the six months before the card-based trial and in the six months on the card-based trial-OLGR WEB SITE DATA

| Jan-08 | \$678,428.60 |  |  |  |
| Dec-07 | \$731,558.92 |  |  |  |
| Nov-07 | \$708,745.03 |  |  |  |
| Oct-07 | \$690,613.26 |  |  |  |
| Sep-07 | \$679,624.00 |  |  |  |

Analysis of data also showed that the following were selected as transfer limits by players (see below). Transfer limits are the maximum monetary transfers from the EGM card to the gaming machine credit meter. In this context, it should be noted that the default transfer limit setting was $\$ 100$ and that some players had changed their transfer limits during the trial period. One hundred dollars was the default limit for regulatory compliance.

Specific transfer limits during the trial included:

- 57 players - selected $\$ 100.00$
- 4 players selected - $\$ 50.00$
- I player - selected $\$ 60.00$

The following maximum card balance limits were also selected. The default setting once again was $\$ 1000$. This also includes limits that were changed by players during the trial (implying that some of the following players may have had more than a single maximum account balance limit):

- 57 players - $\$ 1,000.00$
- 2 players - $\$ 500.00$
-. I player - $\$ 200.00$

# Venue, supplier and LMO experiences with card-based gaming 

This section of the report briefly summarises venue, product supplier and Licensed Monitoring Operator (LMO) experiences with the card-based gaming trial. This was based on a series of interviews with relevant staff and stakeholders.

Key sections include:
-. Venue experiences of card-based gaming
-. System and software supplier experiences of card-based gaming
-. Licensed monitoring operator (LMO) experiences with card-based gaming

## Venue experiences of card-based gaming

Venue staff views<br>and experiences

Seven staff at the Sandgate RSL were interviewed during early September to better understand venue experiences of the trial. It was apparent in the current trial that the venue was highly committed to the concept of precommitment and valued the trial as a way of providing better service and 'protection' for members. From an implementation perspective, venue staff were very pleased with the level of support and professionalism offered by both eBet and Odyssey in supporting both staff training and system implementation.

Despite some small early technical hitches, all staff had a favourable view of the cardbased gaming system and rated the overall experience as either 'good' or 'very good' (on a five point scale). Comments made by staff included:

- I think it's great. It wosn't dounting at all. Players don't have to woit for payouts or hopper refills. We've found it less work There's also less deoling with customers in changing money.
- I think the benefits are that it helps people control their spending. People have been saying - I was surprised how quickly I did that $\$ 100$. But I don't think the problem gamblers are toking it up. Not too mony of the platinum loyaly members have taken it up from as for as I con tell. At the moment, you don't even have to set yourself a limit.
-• I felt very confident with the training provided. We already had the eBet loyalty system for a couple of years ond it made the troining much easier. We were already pretty familior with it
** I think it's pretty easy to use. The only problem is making sure people know to first put their card pin number in. Sometimes they put it in without the pin and then have problems.
-• Troining was pretty easy, os we had pamphlets to back up players. Most players were pretty keen on it. We didn't hove to twist their orm.
-We do save some time, bui I feel we spend more time now troubleshooting the system. It's hard to say given that some problems ore also becouse it's new ond we're not as fomiliar with the new system
*- I think it's great. It wasn't dounting at all. Players don't have to wait for payouts and hopper refills. We've found it less work. Less dealing with the customers at the change boxes, like someone wanting to change a $\$ 50$ note. I think it's moin benefit
-* Not all staff are competent in it os yet though. It tokes a while for staff to learn.
-. It took a long time to get implemented. We were waiting for ages for the regulator to sign it off.
-• If we want a sustoinoble industry, we've got to go with it. I think industry is slowly waming to the ideo. We moy take a hit in spending, as I think revenue will go down as people think obout their expenditure. In hotels, though, they hove anonymous gamblers, so people don't have to sign-on ot all.
- It was a little frustrating before it went in. A lot of stalling and missed dates, but once given the go-ahead, it was oll go.
- Precommitment is definitely the way to go. We went with it, as we wanted to be recognised as a leader in harm-minimisation.
- I think the moin benefits are the ease of pay-outs, the fewer hopper refills and the limits.

Staff views on uptake of card-based gaming

While it would be difficult to validate on objective evidence, there was a perception from venue staff that problem gamblers were unlikely to uptake the system and some suspicion that 'big punters' at the venue did not seem interested in participating in the card-based trial. This was attributed to a perception that players could be 'tracked'.

There was also a staff view that oider people seem less interested in the card - 'Most people seem to be in their 40 s or 50 s. But the older 70 year olds don't seem to wont to know onything obout it Some people have taken the limits, but a lot didn't seem that interested'.

Other comments included:

- Most people were pretty keen on it. We didn't have to twist their arm. I think it was different reasons for different people. Being first was an issue for some. Older ones I think wonted to track their money more.
- The mojority (of people using cord-based gaming) ore smoll bettors. But we don't have many really big punters at this venue. Maybe only half a dozen. In those cases, I think they prefer to stay anonymous. They don't like going to the cashier for the same reason. So having your spending tracked by a card isn't altractive. Most want to remoin unseen.
- I believe thal people mostly went for the convenience. We were also told to approach potrons from the angle of setting a limit. But l'm not sure how attractive people found the limits overoll.
** The print-out statements don't seem to be very popular. I hoven't been asked about one yet.
-* The punter's are now training each other. The computer illiterate seem to require more time (training).
-* It was very different before and ofter the media coveroge. Before the media, people thought it was a credit card. They said 've got enough cards in my wollet already, so not onother one'. But after the medio coverage, people understood it more and became more curious - ot least, at a basic level. At first, people just wanted to be involved in something new. Punters just saw it as the next step for gaming. Others wanted o litule bit more control over their spending - maybe about $50 \%$ I would guess. One 76 year old mentioned he loved it as he can better control his pension spending.

Unlike the first precommitment trial where there were significant difficulties with system training, venue staff had positive praise for the training provided by both eBet and Odyssey. It was also apparent that staff took great interest in the training, as managers were very committed to card-based gaming implementation.

Comments made by staff reflecting training experiences included:
-- The system supplier set up the players ond the troining. I felt very confident ofter the training. We had the eBet loyally system in for about two years, so it was quite eas\%. Training wos pretty easy, as we had pamphlets to back us up and all the errors were on the form.
-. Training took about 10 minutes for each player plus maybe 10 minutes for signing-up and explaining the forms. eBet were always there - if you called the Help Line, they were very helpful. The problems were virtually all fixed by eBet early into the trial.
-- Training people is very simple and stroight forward. It takes about 10 minutes to sign-up the forms and 5-10 minutes for training. So no more thon 30 minutes per player.
-- After I got the hang of it, I suspect the troining got down to about 5-6 minutes per player. 1 found that it took about 2 minutes to explain the benefits, 3 minutes on the forms and 6 minutes on the training. If people weren't IT sawy, training often took about 10-12 minutes.
-- People don't seem to be scared obout where their money is going.
-- I didn't see many people read the books. Maybe only obout 3 or so.

- It's been a pretty big process for me, given that l've been speorheading it It's required a couple of hours each day signing people up. Signing up initially was pretty timeconsuming. We really needed 2-3 people signing up patrons fult-time. When we had someone dedicated to sign-up, it helped push things along. I think we signed up about 40 people in a couple of months. I'm sure that it definitely helped hoving a nice pretty girt ot the front door signing people up.
- It's really quite hard starting in the first month or two. People are a bit uncertain, staff are uncertain and the troining is a bit difficult when you're not used to it. It took me one month to stream line the training overall. So for the first month, it's pretty onerous, but then it gets much easier. After that, it's all very easy. Now I hove a step by step procedure. If problems occur, they still end up over my desk
-• eBet as a system provider have worked amazingly well. They're a very professional ouffit - particularly with the troining. It was very good.

It was also estimated that, on average during the trial period, staff spent roughly 30 minutes signing up about two players per day. It was also apparent that different staff reported that training took longer than others. This is probably also attributable to a practise effect, as some staff tended to be more responsible for training than others.

Apart from some frustration with slow system approvals, venue staff had no found new regulatory procedures associated with card-based gaming as overly onerous or difficult. Most, however, just viewed these as new processes to learn. Specific comments about compliance challenges and new compliance processes included:
-• I don't find the systems that burdensome. We hove a separate bank account for the card based gaming money. Like we might keep $\$ 5,000$ on the account and print a report every day and make on EFT deposit.
-* Cosh reconcilition is sometimes a problem. There seems to be a variance on the meters in the morning. There may be a bug of some sort in the Goming Machine Interfoce (GMI). Every day, we check the Beta-C meter: Then if there's a variance from zero, you have to reconcile. There seems to be a little problem that if there's a jackpot, eBet's system may not have picked it up. It may be due to card based gaming. I'm not sure. It doesn't happen every day, but when it does I just record the voriance.
-• I think what time we save with the system, we spend elsewhere. We do less hopper refills, but spend more time with player troubleshooting issues. But this may be linked to foults that will eventually be fixed.
-. Gaming banking is a whole lot easier now lt's not so much a monual process. in the old way, it's all about working out cancelled credits and cheques ond deriving figures that way. But with coshless, it's all there.
-. We just had on audit by OLGR. They told me the banking was wrong. Cash and card were mixed up. But the formula didn't actually take account of coshless gorning. OLGR didn't realise this. In the end, they worked out that cashless wasn't being taken account of Then when cashiess was included, il made all the difference. There was also confusion over the forms. Sometimes the inspectors soid to put cashless on Form 40, then inspectors said to put it on form 42. OLGR don't seem to communicate with their different departments. So it was a bit frustrating working out this, but in the end, it's a learning curve for everyone.
-. Hopper levels have been pretty static over the trial. A steady $\$ 15 \mathrm{k}$ about every month.
-- We were ready to go 12-18mths prior to implementotion, but it got cought up in opprovals. So there were a few stops and starts. It was supposed to come olive in April 2007. So we got all excited and then nothing happened. Our initiol discussions date back to September 2006. So it was almost like, well give you on ice cream next week and then you can't have it.
-. There were a lot of new things to think through. Like the current forms didn't allow cashless and had to be revised.
*- Some of the requirements were a bit onerous, but we monaged. Like the cord based server having to be video-monitored. We already had video, but we oltered the monitoring to meet the requirements. The server set-up was quite involved, particularly with other equipment potentiolly interfering with the server and ensuring constant power supply and backups.

The approximate amount of time spent by venue staff on card-based implementation was somewhat difficult for the venue to assess. However, Table 31 presents a broad cost estimate of tasks and time. Overall, the analysis shows that the cost to the venue associated with card-based gaming (in time) was roughly $\$ 22,600$. Purchase and maintenance costs would naturally be in addition to this, however, there were commercial-in-confidence and would not be revealed by the system supplier:

Table 31. Estimated costs of implementation - excluding independent testing and R\&D costs VENUE COSTS

| Theks associated with system implemen tatioi (excluchis ARB) | Days | Cost estimate ${ }^{\text {a }}$ ( 5 |
| :---: | :---: | :---: |
| Organising system set-up (eg. video cameras, LMO/supplier liaison etc.) | 5 | \$4,000 |
| Estimate 16.5 hours signing up of players to card-based gaming (over the six month period) | 8.25 | \$6,600 |
| Attending training or venue training its own staff | 4 | \$3,200 |
| Meeting regulatory compliance requirements associated with card-based gaming | 5 | \$4,000 |
| Troubleshooting faults raised by staff or players | 6 | \$4,800 |
| Total estimated costs to venue staff (TME ONLY) | 28.25 days | \$22,600 |

[^13]
## System and software supplier experiences of card-based gaming

Overall experiences

As part of the evaluation, interviews were conducted with the system and software supplier to understand their experiences of the trial. As the system company had previously operated the system in New South Wales, the major perceived hurdle involved compliance with the Queensland regulatory environment and the associated long lead-time to implementation.

Comments about implementation from a system supplier perspective included:

- It all started off in November 2006. So there was a long lead time for us. The guidelines document was produced, but our system didn't fully comply. Although we were told that the guidelines were aspirational. Then the trial started in March 2008. So there was roughly 16 months from product conception to implementation. We found that the goal posts were moved around a bit, but in the end, we were all learning.
- In NSW, cashless is used more for player convenience. Less for harm-minimisation. Hordly anybody uses limits down south. Only a very small percent. But precommitment has really got going in the post 12 mth , so players may take it up more into the future. The bondwagon is storting to get going.
* The implementation was amazing. We thought thot 70 of the 95 EGMs would get up and running in the venue. But by lunch the first day, obout 92 machines were running fine. It exceeded our expectations.
- We have test-beds in Sydney to test EGMs, so we olways expect some degree of integrotion issues. But it went smoothly. Mind you, it's also becouse we put a lot of hard work in at the beginning.
- In the first couple of weeks, we explained about developing player interest and all the bonking regulations. We tried to get everyone confident from day I. The implementation on day one only took 3-4 hrs. I expected many hitches, but was pleasantly surprised.
- The first 5 days, we ran troining sessions with staff with Odyssey present. This was moinly to make staff feel confident training the members. We also focused on education of the back-of house stoff in the first week So by the time, staff were signing up players, they seemed to feel pretty confident.
*- During the next three months, we came in to view the machines ond left bug fixes for the first two months. So we could stockpile bugs and fix them in a batch. While the system recognises the ECT links, on some occasions, it did not pick up the link
* I think the requirements here are a little more involved and prescriptive thon other states. In NSW. we deal directly with the regulotor, but in Queensland, it's with the LMO, so that makes a difference too.
- Dealing with the venue staff was great. Their support was fantostic overoll.
*. We'd like to understand where to from here with the new system. We'd like blanket approvol state-wide for anyone in Queensland to use the system.
* We were expecting a lot more audits overoll. When we do field trials in NSW, they tend to do more audits and go through every single file checking the data.

# Licensed monitoring operator (LMO) experiences with card-based gaming 

Overall experiences

The Licensed Monitoring Operator (LMO) used learnings from the first precommitment trial in 2004 to develop a new model of working with venues and system suppliers in the implementation of card-based gaming, This, along with strong venue and staff support, was also seen to be a key success factor in the 2008 trial.

Comments included:
-. In the first triol, we realised that we were far too involved in the system implementation. We wanted venues to be more hands-on. So this time, we sat down with eBet and said this is the venue and eBet worked through the implementation issues. I wos writing monuals in the first trial for a product, for which we had no development responsibilities. But in this trial, the eBet team had developed the product.

- The last triol dion't give the supplier enough confidence in the Government's intention. As the LMO, we had no control over this. But this time, we explored a range of alternatives and eBet presented as the best system. Precommitment products seem to now be more supported by the regulator. In the former trial, it was a relatively new concept. But now with Xenophons and Fieldings (Senotors), it's really in the community's face. Now it's a massive tumaround. We've also had mony people from down south come through to view the trial.
- We are really happy with the success of the trial, but we think the Queenslond Government really missed the opportunity to actively promote the trial. We were hopeful that someone could come in to make a high-profle announcement, but it didn't happen in the end. I'm not sure why.
- Now everything has been more fluid in this trial. We had high confidence that the regulator is very committed. There were a few areas of the original principles document that we couldn't really meet and fortunately they provided dispensations. One of the big success factors is that patrons were already fomiliar with the player loyalty system. So it really helped support coshless system uptake.
- We had an accredited testing focility test the eBel product. There are only obout two of these in the country and one is based in Melboume. eBet paid for the testing and a full range of tests were undertaken in line with the specifications of the regulator. Testing was purely technicol in noture - not anything to do with harm-minimisation per se. But the accredited testing facility hos made us all feel much more comfortable with the product.
- It was really helpful having a single contact point ot OLGR for coordinating with the regulator. We also felt that they were very open to hearing own comments and controls and they were also receptive to different ideas and said tell us whot you have in mind and we'll let you know whether it's appropriate.
- We realised from the first triol that limits were too confusing. So we changed the nett per month on the original system to nett per day. We leamed a lot from the first triol.
* I like that people in the eBet system get little reminders. For exarmple, you get a reminder when you transfer money, that you've reached your limit. These ore like litlle tops on the shoulder.
-* We also redesigned the whole process to make it eosier to sign-up in the current triol, it was also necessary to moke changes based on the new Anti-Money Laundering legislation. The know your customer' principle is now followed. I believe the Redclife product hos a $\$ 10,000$ limit to stoy under the requirements. Under the Act, all venues and ciubs are reporting entities and are required to notify any suspicious transactions. The triol was also limited to just members on the basis that it wos required that the venue 'knows the customer' as part of Austrac.
-. Precommitment was opt-in as part of the current system. It wasn't made compulsory. So players could just benefit from coshless gaming with having to set a limit. You currently con still get loyolly points without using cashless gaming, so this could be a further area to explore into the future.
-A A maximum of $\$ 1,000$ was allowed to be stored on the card. This means tha if you have $\$ 1,00$ I on the cord, you need to withdraw $\$ 1$ before you can continue to play with the cord.
-- eBet supplied the 'how to' brochures for the players that signed-up to cord based gaming. We allowed the venue to do all of the training of players. We stepped back and let eBet drive the whole process.
-• There were a small number of bugs in the beginning, but nothing major - Unlike the last triol, where l'd get calls day ond night, this system is a lot more stable.
-- From a systems perspective, it's been much easier. It's been great and certainly a smoother run than the first trial. Allhough I'm a bit disappointed that we haven't got more progression from the trial.
-. My concern is that we've only created a module that hangs off the back of the player loyalty system. So people have to voluntarily choose precommitment. So the next level needs to have facilities for a guest to sign-up who doesn't have a loyalty cord.

A range of comments were made by the LMO about regulatory compliance aspects of the card-based trial. Comments included:
-- We put a limit on the account to $\$ 1,000$ to meet Austrac (Anti-Money Laundering ond Counter Terrorism Act) and requirements of the Bonking Act. The new Austrac requirements were also easier to meet, os they ore now risk-based requirements, with the concept that each venue hos to 'know the customer'. I understand that the system up the road allows up to $\$ 10,000$ on the card. I'm surprised that such an omount is permitted, given the risks involved.

- Areas for legislative compliance under cashless gaming now include:
(I) The Banking Act - which prescribes protection of funds and supply of statements to players. And if there is no movement in a player's account, we need to send the statement every three months to advise that the bolance is available.
(2) The Electronic Tronsfer Act - this allows people access to statements, so it's an opt-in option for players, as is required with ATM statements.

Technically speaking, though, it's only once money is put into an EGM, that it comes under the jurisdiction of the Gaming Act. Hence, money stored on cords is not under the Goming Act until it is transferred.

- A physical floot olso has to be administered for player protection under card based (cashless) gaming. At the end of each day, the venue has to transfer money into a trust fund (This was also reported as an easy area for 'slip-up' by venues). We think thot there needs to be an independent body to be signatory to the account for player protection. Interest accrued on the trust account should also be dedicated to player hamminimisation meosures.
-- We get the impression that Government is interested in a centralised credit system. If someone puts $\$ 50$ into on EGM, spends $\$ 10$ ond there's $\$ 40$ left, here the $\$ 40$ is held by the venue. But up the road, it goes to Max Gaming's Servers. It may sound like a good idea, but the cost to the venue is going to be quite high for this sort of system.

## Appendix

# Appendix A - Card-based gaming survey 

## YOUR VIEWS ABOUT THE NEW GAMING CARD

Good moming/evening. This is $X X$ calling from Schottler Consulting. I understand that you have expressed interested in taking part in a social research study into card based gaming at the Sandgate RSL. Now that the card based gaming has been operational for several months, I was wondering if you would take part in 20 min survey to give feedback into this important social research study.

People who agree to provide feedback and agree to provide their loyalty card data for analysis will be rewarded with a $\$ 50$ Coles Myer Shopper voucher. All information is confidential and no individual results will be revealed.

Would you be interested to take part in this study? RESPONSE Y/N $\qquad$
Are you happy to give consent for your survey and play data to be analysed as part of the study? RESPONSE Y/N
(IF No - Advise respondent that we need to be able to onalyse player data to explore the harm-minimisation aspect of card based goming and that only people who provide this consent are able to able to take part. Thanks anyway for your time though.)

## Other info

If they ask about the company: Schottler Consulting web site is umw.schottler.com.au or put on to Sarah Hare (07) 3166 9096. This project has been commissioned by the Office of Liquor, Gaming and Racing which is part of the State Govemment of Queensland. This project is exploring the harm-minimisation potential of card based gaming for poker machine players. This important study has been sponsored by Policy, Legislation \& Harm Minimisation of the Office of Liquor, Gaming and Racing

## A. YOUR GAMBLING OVER THE PAST I2MTHS

The first questions refer to all your gambling in the past 12 mth . Please consider your pokies play as a type of "gambling" for the purpose of the study, as well as any other types of gambling you do (eg. casino table games, lotteries, competitions, punting etc.)
I. Thinking about the past 12 months, how often have you bet more than you could really afford to lose? Would you say (PROMPT):
0. Never
I. Rarely
I. Sometimes
2. Often
3. Always
2. Thinking about the past 12 months, how often have you needed to gamble with larger amounts of money to get the same feeling of excitement? (PROMPT): WOULD YOU SAY
0. Never
I. Rarely
I. Sometimes
2. Often
3. Always
3. Thinking about the past 12 months, WHEN YOU GAMBLED, how often have you gone back another day to try to win back the money you lost? (PROMPT): WOULD YOU SAY
0. Never

1. Rarely
I. Sometimes
2. Often
3. Always
4. Thinking about the past 12 months, how often have you borrowed money or sold anything to get money to gamble? (PROMPT) WOULD YOU SAY
5. Never
6. Rarely
I. Sometimes
7. Often
8. Always
9. Thinking about the past 12 months, how often have you felt that you might have a problem with gambling? (PROMPT)

WOULD YOU SAY
0. Never
I. Rarely
I. Sometimes
2. Often
3. Always
6. Thinking about the past 12 months, how often have people criticized your betting or told you that you had a gambling problem, regardless of whether or not you thought it was true? (PROMPT) WOULD YOU SAY
0. Never
I. Rarely
I. Sometimes
2. Often
3. Always
7. Thinking about the past 12 months, how often have you felt guilty about the way you gamble, or what happens when you gamble? (PROMPT) WOULD YOU SAY
0 . Never

1. Rarely
I. Sometimes
2. Often
3. Always
4. Thinking about the past 12 months, how often has your gambling caused you any health problems, including stress or anxiety? (PROMPT) WOULD YOU SAY
5. Never
6. Rarely
7. Sometimes
8. Often
9. Always
10. Thinking about the past 12 months, how often has your gambling caused any financial problems for you or your household? (PROMPT) WOULD YOU SAY
11. Never
I. Rarely
I. Sometimes
12. Often
13. Always

## B．HOW THE CARD AFFECTED YOUR POKIES PLAY

If at all，how do you believe that using the gaming card affected your pokies play behaviour？（describe）
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## c．YOUR VIEWS ON THE NEW CARD

Using a scale where $1=$ strongly disagree and $5=$ strongly agree（ 3 is neutral），please indicate to what extent you agree or disagree with the following statements about the gaming card．．．

| STATEMENTS | YOUR AGREEMENT LEYEL |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { 云䍐 } \\ & 0 \\ & 0 \\ & 0 \\ & 0 \\ & 0 \end{aligned}$ |  | T \＃ \％ | 发 |  |
| SIGNING UP FOR THE NEW GAMING CARD |  |  |  |  |  |
| I．Signing up for the new gaming card was easy and straightforward | 1 | 2 | 3 | 4 | 5 |
| 2．Signing up for the new gaming card was time－consuming | I | 2 | 3 | 4 | 5 |
| 3．Were you provided with written information prior to signing up？（Circle below） <br> I．Yes <br> 2．No <br> 4．Did you read the written information？（Circle below） <br> I．Not at all <br> 2．Read a little <br> 3．Read most of it |  |  |  |  |  |
| 5．（If Q4＝yes）The written information provided on the new gaming card clearly explained card based gaming | 1 | 2 | 3 | 4 | 5 |
| WORKING OUT HOW TO USE THE NEW GAMING CARD |  |  |  |  |  |
| 6．It was easy to work out how to use the gaming card at the start of the trial | 1 | 2 | 3 | 4 | 5 |
| 7．Staff provided good training or instructions on how to use the gaming card | 1 | 2 | 3 | 4 | 5 |
| 8．Venue staff were open to me asking questions about the gaming card | 1 | 2 | 3 | 4 | 5 |
| 9．It was easy to reach staff if I had any queries or problems with the gaming card | 1 | 2 | 3 | 4 | 5 |
| 10．I felt confident using the gaming card the first time after my first day of using it | 1 | 2 | 3 | 4 | 5 |
| 11．I now feel quite confident using the gaming card | 1 | 2 | 3 | 4 | 5 |
| 12．The card based gaming system is quite easy to use and user－friendly | 1 | 2 | 3 | 4 | 5 |

| STATEMENTS | YOURAGREEMENT LEVEL |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 픋 | - |  |
| 13. I enjoyed using the gaming card for pokies play at the Sandgate RSL. | 1 | 2 | 3 | 4 | 5 |
| 14. Using the gaming card made my pokies play a more enjoyable experience | 1 | 2 | 3 | 4 | 5 |
| 15. Using the gaming card helped me enjoy my pokies play more than regular cash gaming | 1 | 2 | 3 | 4 | 5 |
| YOUR EXPERIENCE OF THE NEW GAMING CARD |  |  |  |  |  |
| 16. Using the card encouraged me to think more about my pokies expenditure, compared to regular cash based gaming | 1 | 2 | 3 | 4 | 5 |
| 17. Using the card encouraged me to think more about the amount of time I spent playing the pokies, compared to regular cash based gaming | 1 | 2 | 3 | 4 | 5 |
| 18. Playing with the card encouraged me to set myself a spend limit for my pokies play, compared to regular cash based gaming | 1 | 2 | 3 | 4 | 5 |
| 19. Playing with the card encouraged me to think more about how much I can afford to spend on pokies play, compared to regular cash based gaming | 1 | 2 | 3 | 4 | 5 |

## D. HOW EASY OR DIFFICULT YOU FOUND THE GAMING CARD

Using a scale where $1=$ very difficult and $5=$ very easy ( 3 is neutral), please indicate how easy or difficult you found the following aspects of pokies play with the gaming card.

|  | YOUR AGREEMENT LEVEL |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| How easy or difficult was it to... |  |  |  | 彩俞 |  |
| 34. Remembering to insert the card into the gaming machine before pokies play | 1 | 2 | 3 | 4 | 5 |
| 35. Remembering your PIN number for your gaming card | 1 | 2 | 3 | 4 | 5 |
| 36. Transferring money from the card to the pokies machine | I | 2 | 3 | 4 | 5 |
| 37. Transfeming money from the poker machine back to your card, when you want to leave | 1 | 2 | 3 | 4 | 5 |

## E. WHETHER YOU NOTICED ANY PROBLEMS WITH THE GAMING CARD?

1. Did you come across any problems with the gaming card while using it? (eg. technical hitches, usability issues etc.)
2. Yes
3. No
4. If YES - Please describe the problems and your experiences in detail...
5. How do you believe that the design of the gaming card system could improve?

## E. HOW THE CARD AFFECTED YOUR PLAY

1. I'd like you to now indicate to what degree you believe that using the gaming card affected the time you spent playing the pokies? (or perhaps it had no effect) (PROMPT)
2. It reduced the time I spent playing the pokies quite a lot
3. It reduced the time I spent playing the pokies a little
4. It had no impact on the amount of time I spent playing the pokies
5. It increased the time I spent playing the pokies a little
6. It increased the time I spent playing the pokies a Jot
7. Now please indicate to what degree you believe that using the gaming card affected the total money you spent playing the pokies? (or perhaps it had no effect) (PROMPT)
I. It reduced the money I spent on the pokies quite a lot
8. It reduced the money I spent playing the pokies a little
9. It had no impact on the amount of time I spent playing the pokies
10. It increased the money I spent on the pokies a little
11. It increased the money I spent on the pokies a lot
12. Now please indicate to what degree you believe that using the gaming card encouraged you to think more actively about your spend limits when playing the pokies?
I. Using the card I thought a lot less about my spend limits
13. Using the card I thought a litile less about my spend limits
14. Using the card had no effect on my thinking about spend limits
15. Using the card I thought a little more about my spend limits
16. Using the card I thought a lot more about my spend limits
17. To what degree does the gaming card make you prefer the Sandgate RSL versus other venues for pokies play? (PROMPT)
18. It makes you much less interested in playing at the Sandgate RSL
19. It makes you a little less interested in playing at the Sandgate RSL
20. It had no impact on your interest in playing at the Sandgate RSL
21. It makes you feel a little more interested in playing at the Sandgate RSL
22. It makes you feel a lot more interested in playing at the Sandgate RSL
23. Which type of poker machine gaming do you believe makes it easier to keep track of and monitor your pokies spending? (PROMPT)
24. Regular coins/notes (cash) based gaming (ie, normal gaming before the new gaming card was introduced)
25. The new card based gaming card
26. Both the same - can't see any difference

## G. LIMITS SET FOR YOUR CARD BASED GAMING

I. Please complete the following - write "Don't know" if you don't remember the values set. Write a number in each of the 9 separate boxes.

| TYRES QF GARD IIMIIS YOUSET | (a) <br> Amoint youset mhen you signedthe inlial form for card basedgenhls | (b) <br> earrent amount yannow haveset on youli saming card | (c) <br> Hommany thinesdid you INCREASE th's limit during the tritl | (D) <br> Hovmany imes dfa YuDECREASE this limit diring the trial? |
| :---: | :---: | :---: | :---: | :---: |
| 1. Please indicate the nett daily expenditure limit you set on your gaming card - including the INITIAL LIMIT (when you signed up) and the CURRENT LIMIT now on your gaming card | (Dollars per day nett expenditure) | (Dollars per day nett expenditure) | (Times) | (Times) |
| 2. Please write down the maximum balance you set for your gaming card including the INITIAL maximum balance (when you signed up) and the CURRENT maximum balance now on your gaming card | (Max dollars able to be kept on card - not what you have on the carc) | (Max dollars able to be kept on card not what you have on the card) | (Times) | (Times) |
| 3. What was the default transfer amount that you INITIALLY put on the form for transfers from the card to the poker machine and the CURRENT default transfer amount you have for your card. | (Default transfer amount) | (Default transfer amount) | (Times) | (5imes) |

2. How much money do you CURRENTLY have on your gaming card as a balance? (eg. $\$ 50$ or $\$ 200$ or $\$ 2$ etc.)
(A) Total Balance of money you have currently on the card $\qquad$
(B) Write the date that this balance was on the card: $\qquad$
3. If relevant, please indicate why you increased your nett daily expenditure limit?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
4. To what degree did you think about increasing your nett daily spend limit on the gaming card (even if you didn't end up increasing the nett daily expenditure limit)
5. I never thought about increasing my daily spend limit
6. I sometimes thought about increasing my spend limit
7. I frequently thought about increasing my spend limit
8. To what degree would you also be interested in setting yourself an ADDITIONAL weekly, monthly or annual limit on your gaming card to help keep track of your pokies spending?
I. Not at all interested
9. Somewhat interested
10. Quite interested
11. What additional type of limit would be most useful?
12. Weekly limit
13. Monthly limit
14. Quarterly limit
15. Annual limit
16. Other (which): $\qquad$
17. How many times if at all did you ask staff at the venue for a statement of your expenditure for your gaming card?
$\qquad$ times
18. How useful was it getting the expenditure statement? (PROMPT)
I. Not at all useful
19. Somewhat useful
20. Quite useful

## H. PLAYING WITH YOUR CARD, PLUS REGULAR CASH/COINS POKIES PLAY

I. After getting your gaming card, how many times did you revert back to the normal cash based gaming (ie. not entering your pin for your card or just using notes and coins without your card) during the trial? (write a number below)
$\qquad$ times
2. What was the SINGLE main reason you went back to regular cash based play - rather than card based gaming? (one answer only)

1. Forgot to use the card
2. Didn't bring the card with $\mathrm{me} / \mathrm{misplaced}$ the card
3. Couldn't see any real benefits of the card/didn't like it
4. Went over my card limit - so stopped using the card
5. Found the card too hard to use/had problems using it
6. Wanted to stop the warnings I was getting (ie. that my limit was exceeded)
7. Other (record):
8. Did you receive any wamings during card based gaming that you had reached your limit?
9. Frequently
10. Sometimes
11. Not at all
12. If you received wamings - If I =strongly disagree and $5=$ strongly agree ( 3 is neutral), please rate the impact of these warnings on you personally in terms of the following...

| Areas of impact | YOUR AGREEMENT LEVEL |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{aligned} & \mathscr{4} \\ & \stackrel{4}{0} \\ & \stackrel{0}{0} \\ & \hline 0 \end{aligned}$ | $\begin{aligned} & \text { 要 } \\ & \text { Z } \end{aligned}$ | $\stackrel{\mathscr{U}}{\stackrel{4}{4}}$ |  |
| 1. Receiving wamings made me think about my gaming expenditure | 1 | 2 | 3 | 4 | 5 |
| 2. Receiving wamings helped me keep to my gambling spend limit | 1 | 2 | 3 | 4 | 5 |
| 3. Receiving warnings made me think about the time I was spending on the pokies | 1 | 2 | 3 | 4 | 5 |
| 4. Receiving wamings made me think about whether I can afford to gamble more | I | 2 | 3 | 4 | 5 |

5. To what degree do you believe that it is a good idea to have a 24 hr cooling off period before someone is allowed to change their gambling limit? (circle)
I. This is very useful
6. This is somewhat useful
7. I don't see much use in this overall
8. This is annoying
9. To what degree, do you believe that gaming cards should be made compulsory or voluntary for all players to use as a consumer protection measure?
I. They should be made compulsory for all players
10. They should be made voluntary as an option for players
11. Don't see any reason to even offer gaming cards voluntarily

## I. YOUR CURRENT THOUGHTS ABOUT YOUR GAMBLING

1. The following questions are designed to identify how you personally feel about your gambling right now. Using a scale where $\mid=$ strongly disagree and $5=$ strongly agree ( 3 is neutral), how much do you agree or disagree with the following...

| Questions |  | \% ${ }^{\text {¢ }}$ | \% ${ }_{\text {b }}$ | $8$ | sis |
| :---: | :---: | :---: | :---: | :---: | :---: |
| I. I enjoy my gambling, but sometimes I gamble too much | 1 | 2 | 3 | 4 | 5 |
| 2. Sometimes I think I should cut down on my gambling | 1 | 2 | 3 | 4 | 5 |
| 3. It's a waste of time thinking about my gambling | 1 | 2 | 3 | 4 | 5 |
| 4. I have just recently changed my gambling habits | 1 | 2 | 3 | 4 | 5 |
| 5. Anyone can talk about wanting to do something about gambling, but 1 am actually doing something about it | 1 | 2 | 3 | 4 | 5 |
| 6. My gambling is a problem sometimes | 1 | 2 | 3 | 4 | 5 |
| 7. There is no need for me to think about changing my gambling | 1 | 2 | 3 | 4 | 5 |
| 8.1 am actually changing my gambling habits right now | 1 | 2 | 3 | 4 | 5 |
| 9. Gambling less would be pointless for me | 1 | 2 | 3 | 4 | 5 |

## J. PROFILE OF YOURSELE

25. The following information is for background demographics only and all information is strictly confidential. No individual responses will be revealed.

| (a) What is your loyalty card number for Sandgate RSL? | (b) Please provide your full name (first name + surname) | (c) What phone numbers may we contact you on to discuss other interview times? |
| :---: | :---: | :---: |
| Note this is compulsory for research participation. Make sure you record this with $100 \%$ accuracy, as incentives cannot be paid if this number is incorrect. | First name $\qquad$ <br> Surname $\qquad$ <br> Note that individual results are strictly ANONYMOUS | (i) Home - $\qquad$ <br> (ii) Work- $\qquad$ <br> (iii) Mobile - $\qquad$ <br> (only provide contact numbers which you are happy to be contacted on for purpose of interview booking) |
| (d) What is your email address? | (e) What is your home postal address? | (f) What is your gender? |
| (i) Email $\qquad$ <br> (Only provide if you are able to regularly check your email) | Address $\qquad$ <br> Suburb $\qquad$ Postcode $\qquad$ <br> (For mail correspondence only - note that we may send you mail about this study and will forward your voucher to this address the voucher may take up for $4 w k s$ ) | I. Male <br> 2. Female |
| (g) What is your age? | (h) Apart from gambling for fun, please select the best other SINGLE REASON you play the pokies? | (i) On average, how many standard drinks do you drink during each pokies session? |
|  | 1. You feel a little bored or lonely <br> 2. It helps reduce stress, anxiety or trauma <br> 3. You play as your friends play pokies when you get together <br> 4. You play pokies to help raise money for household expenses <br> 5. Other reason? |  |

| (i) On what date did you complete this survey? | (k) On average, how often do you typically play the pokies at the Sandgate RSL? (circle one) | (I) What is the approximate total income of all people combined in your household? (weekly or annual household income before tax - including any govt payments) |

# THANK YOU - THIS COMPLETES THE SURVEY. PLEASE ALSO NOTE THAT IF YOU WOULD LIKE TO 

As a market Research company, we comply with the requirements of the Privacy Act. Would you like me to read out our full Privacy Statement?
I. YES
2. NO

In accordance with the Privacy Act, once information processing has been completed, please be assured that your name and contact details will be removed from your responses to this survey.
After that time we will no longer be able to identify the responses provided by you.
However, for the period that your name and contact details remain with your survey responses, which will be approximately 2 weeks, you
will be able to contact us to request that some or all of your
information be deleted. If you request information or your survey to be deleted, please be aware that respondents who request this will not be eligible for the $\$ 50$ shopping voucher.

If you have any questions, please feel welcome to contact our Director Sarah Hare 31669096.

INTERVIEWER - PLEASE CHECK THAT ALL QUESTIONS ARE COMPLETE.

## Appendix B - Usability testing of card

Ask player to complete all forms associated with usability testing. This should include the (1) limit sign-up form ond asking players to also read (2) the supplied eBet written information brochure. Ployers should also be told about (3) expenditure statements and (4) that losing the card does not mean losing the money (but players should keep PIN safe).

1. Using a 5 point scale where $1=$ very poor and $5=$ very good, how would you rate the overall ease of form completion?
2. Using a 5 point scale where $I=$ very poor and $5=$ very good, how would you rate the overall time required to sign-up for card-based gaming? $\qquad$
3. If $\mathrm{I}=$ very difficult and $5=$ very easy, how easy or difficult was it to understand the supplied written information provided to assist players during sign-up? $\qquad$
4. Could you suggest any ways to further improve the written information supplied to players on card based gaming or the sign up process?
$\qquad$
$\qquad$
$\qquad$

Now ask the player to describe the three types of limits (daily spend, transfer and card bolance) ond rate their understonding.
5. What are the three types of limits available on card-based gaming? (UNPROMPTED)
6. If I=very difficult and 5 =very easy, how easy or difficult was it for the player to understand the concept of a:
(A) Nett daily expenditure limit $\qquad$
(B) Transfer limit $\qquad$
(C) Maximum card account balance limit $\qquad$
(D) Record any player experiences/comments

Ask the player whether they would set a DAILY SPEND LIMII in real life and how much they would elect to have their limit.
7. In a real life situation, would you set a daily spend limit?
I. Yes
2. No
8. Why do you say Yes or No?
$\qquad$
$\qquad$
$\qquad$
9. We are interested in understanding the factors that go into setting a nett daily spend limit. Why did you select the amount you selected?
$\qquad$
$\qquad$
$\qquad$

Ask the player whether they would set a TRANSFER LIMIT in real life and how much they would elect to have their limit
10. In a real life situation, would you set a transfer limit?
I. Yes
2. No
11. Why do you say Yes or No?
2. We are interested in understanding the factors that go into setting a TRANSFER limit. Why did you select the amount you selected?

Ask the player whether they would set a CARD BALANCE LIMIT in real life and how much they would elect to have their limit.
13. In a real life situation, would you set a card balance limit?
I. Yes
2. No
14. Why do you say Yes or No?
15. We are interested in understanding the factors that go into setting a CARD BALANCE limit. Why did you select the amount you selected?

Next task is to train the player to use the card using a consistent training methodology. This should include clarifying the steps of:
(1) card insertion and PIN entry
(2) placing money on the card using the $E G M$
(3) transferring money from the card to the credit meter on the EGM
(4) transferring money from the credit meter to the card outomatically by just removing the card
(5) checking the balance held on the card (via the EGM, not the cashier)?

Then ask the player to do the same steps above.
16. How well did the player perform the above tasks?
(I = couldn't do it, 2=needed a lot of help, 3=needed a litile help, 4=did it without problems) (No prompting)
(a) Card insertion?
(b) PIN entry?
(c) Placing money on the card using the EGM? $\qquad$
(d) Transferring money from the card to the credit meter on the EGM? $\qquad$
(e) Transferring money from the credit meter to the card automatically by withdrawing it?
(f) Checking the balance held on the card? $\qquad$ —

Add notes on the above about usability issues.

Then ask play to continue to play for 2 minutes and then osk for any comments on ways to improve system design.
$\qquad$

Then show player an expenditure statement (to be printed out prior to commencement) and then ask for feedback
17. If $1=$ not at all useful and $5=$ very useful, how useful is the information on this expenditure statement $\qquad$
18. How would you improve the statement or the way that information is presented?
$\qquad$
$\qquad$
$\qquad$
19. Based on usability of the gaming card, how interested are you to take up the card? ( $1=$ not at all, $5=$ very interested)

## SIGNATURES

Please note that results will be de-identified and be used to further improve the harm-minimisation benefts of card-based gaming. This is to acknowledge for company taxation reasons that you have received the $\$ 50$ voucher:

Player name $\qquad$ Player mobile/contact number $\qquad$ Player email $\qquad$
Player signature $\qquad$ Date of usability test $\qquad$
.

[^0]:    a. Question - Did you read the written information (response options prompted) (Base - All cord-based players who recalled receiving written information)

[^1]:    a. Question - Using a scale where $1=$ very dificult and 5 न-very easy ( 3 is neutrol), please indicate to what extent you agree or disagree with the following stotements about the goming card (Base: All card-based players)

[^2]:    a. Question - Using a scale where $1=$ strongly disagree and $5=$ strongly agree ( 3 is neutral), please indicate to whot extent you agree or disagree with the following stotements about the gaming card (Base: All cord-bosed players)

[^3]:    o. Question - To what degree would you also be interested in setting yourself on ADDTTONAL weekty, monthly or annual limit on your gaming card to help keep track of your pokies play?
    (Base: All card-bosed players)

[^4]:    o. Question - Did you receive any wornings during card based gaming that you had reached your limit? (Bose: All card-bosed players)

[^5]:    0. Question - If you received wornings - If I =strongly disagree and $5=$ strongly agree (3 is neutral), please rote the impact of these wormings on you personally in tems of the following... (Base: All card-bosed ployers)
[^6]:    o. Question - If you received warnings - If $1=$ strongly disogree and $5=$ strongly agree ( 3 is neutral), please rate the impact of these wamings on you personally in terms of the following... (Base: All cord-based players)

[^7]:    a. Question - To what degree do you believe that it is a good idea to have a 24 hr cooling off period before someone is ollowed to change their gambing limit? (Base: All card-based players)

[^8]:    a. Question - After getting your gaming card, how many times did you revert back to the normal cosh bosed gaming (ie. not entering your pin for your cord or just using notes and coins without your card) during the triol? (Bose: All cord-based ployers)

[^9]:    0. Question - What was the single main reason you went back to regular cash based play - rather than cord bosed gaming? (Base: All cardbosed players)
[^10]:    a. Question - To what degree do you believe that gaming cards should be made compuisory or voluntary for all players to use as a consumer protection measure? (Base: All cord-bosed ployers)

[^11]:    a. Bose - Bosed on analysis of raw eBet EGM play data (supplied by eBet) (Missing data indicated by period -implies no play)

[^12]:    a. Based on ployers who set a limit during cord-bosed goming. Excludes doys where EGM expenditure was zero.

[^13]:    a. Based on $\$ 800$ per day (estimated)
