Figures are preliminary.  
<sup>1</sup> Figures are rounded to the nearest whole number.  
<sup>2</sup> Personal mobility device users were recorded as pedestrians prior to 1 November 2022.  
<sup>3</sup> Includes other fatalities such as horse riders and train drivers and passengers.  
<sup>4</sup> Includes all fatalities as a result of crashes involving heavy freight vehicles. These figures are also included in the road user type breakdown above (e.g. drivers, passengers, etc).

During 1 January to 15 June 2025, there were 129 fatalities as a result of crashes within Queensland, which is equal to the same period for the previous year and nine fatalities (or 7.3%) greater than the previous five year average for the same period (Table 1).

Note:

Figures are preliminary.

\* Figures are rounded to the nearest whole number.

^ Where age was known.

~ Drug driving figures for fatal crashes are available from 1 January 2017, therefore figures have been compared against the previous four year average.

# Restraint use is not applicable for all road user types (i.e. pedestrians, motorcycle riders/pillions, etc) and is not always known. Therefore the variation in unrestrained vehicle occupant casualties is measured as a change in the percentage of all vehicle occupant casualties, instead of the change in number, where restraint use was known.

Note:

Figures are preliminary.

\* Figures are rounded to the nearest whole number.

^ Where age was known.

# Restraint use is not applicable for all road user types (i.e. pedestrians, motorcycle riders/pillions, etc) and is not always known. Therefore the variation in unrestrained vehicle occupant casualties is measured as a change in the percentage of all vehicle occupant casualties, instead of the change in number, where restraint use was known.
