Purpose

The purpose of this report is to provide a summary of the characteristics of road fatalities and motor vehicles/controllers involved in fatal crashes during 2021.

Data

2.1 Definition of a road traffic crash

The road traffic crash data presented within this report has been extracted from the Department of Transport and Main Roads' (TMR) RoadCrash database. A road traffic crash, for the purpose of the RoadCrash database and reporting, is a crash reported to the Queensland Police Service (QPS), which resulted from the movement of at least one road vehicle on a public road or road related area and resulted in a person being killed or injured.

Queensland road fatalities during 2021

(Note: Data extracted 13 May 2024)

3.1 Long term trend

The Queensland road fatality rate for 2021 was 5.27 fatalities per 100,000 population, which is 2.0% fewer than the rate for the previous year (5.38).

This represents a departure from the consistently lower fatality rates in the years leading up to 2019 and is the seventh lowest road fatality rate recorded for a calendar year since accurate records began in 1952. The lowest road fatality rate within Queensland (4.32) occurred during 2019 and the second lowest road fatality rate (4.72) occurred during 2014.

Figure 1: Fatalities per 100,000 population, Queensland, 1969 to 2021

3.2 Queensland road fatalities

In 2021 there were 275 road fatalities within Queensland, which is three fatalities (or 1.1%) fewer than the previous year of 278 fatalities and 27 fatalities (or 10.8%) greater than the previous five-year average.

3.3 Major characteristics, relative increases, and relative decreases of road fatalities within Queensland

3.3.1 Major characteristics¹

The major characteristics of road fatalities in Queensland during 2021 were:

- involving the fatal-five – 176 (64.0%)
- involving drivers/riders who disobeyed road rules - 176 (64.0%)
- alcohol/drug related crashes - 117 (42.5%)
- occurring in North Coast Police Region - 72 fatalities (38.9%)
- involving young adult drivers/riders (16-24) - 79 fatalities (28.7%)
- involving speeding drivers/riders - 78 fatalities (28.4%)
- unrestrained vehicle occupant fatalities - 40 fatalities (27.2% of vehicle occupant fatalities, where restraint use was known).

3.3.2 Increases²

The major relative increases in the number of road fatalities in Queensland during 2021 compared with 2020 and the previous five-year average (2016 to 2020) were:

- involving the fatal-five – 176 (64.0%) – 25 (16.6%) greater than 2020 and 45 (34.1%) greater than the previous five-year average
- unrestrained vehicle occupant fatalities – 40 (27.2% of vehicle occupant fatalities, where restraint use was known) – three (7.0%) fewer than 2020 and 10 (31.6%) greater than the previous five-year average
- involving speeding drivers/riders – 78 (28.4%) – nine (or 13.0%) greater than 2020 and 21 (or 35.9%) greater than the previous five-year average
- involving motorcycles/mopeds – 67 (or 24.4%) – 12 (21.8%) greater than 2020 and 15 (or 29.3%) greater than the previous five-year average
- involving drink drivers/riders – 64 (23.3%) – two (3.2%) greater than 2020 and 12 (or 23.1%) greater than the previous five-year average.

3.3.3 Decreases³

The major relative decreases in the number of road fatalities in Queensland during 2021 compared with 2020 and the 2016 to 2020 average were:

- pedestrian fatalities – 20 (7.3%) – 14 (or 41.2%) fewer than 2020 and 12 (37.1%) fewer than the previous five-year average.

¹ Major characteristics represent at least 25 per cent of road fatalities within Queensland during 2021.

² Major relative increases represent at least 20% of all fatalities during 2021 and increased when compared with the previous five-year average (approximately 20%).

³ Major relative decreases represent at least 10 per cent of road fatalities during 2021-22 and decreased during 2022-23 by at least 10 per cent when compared with the previous five-year average.

3.4 Interstate comparison – fatalities per 100,000 population

The Queensland road fatality rate for 2021 was 5.27 fatalities per 100,000 population, which is 2.0% lower than the 2020 fatality rate (5.38), and is fourth behind ACT (2.43), NSW (3.40) and VIC (3.57).

Table 1: Fatalities per 100,000 population by State, 2021 compared with 2020

| State | 2020 | | | 2021 | | | Percentage difference in rate with the previous year |
|------------------------------|------------|----------------------------------|-----------------------------------|------------|----------------------------------|-----------------------------------|--|
| | Fatalities | Population ('000) as at Jun 2020 | Fatalities per 100,000 population | Fatalities | Population ('000) as at Jun 2021 | Fatalities per 100,000 population | |
| Queensland | 278 | 5,165.6 | 5.38 | 275 | 5,215.8 | 5.27 | -2.0% |
| New South Wales | 284 | 8,110.6 | 3.50 | 275 | 8,097.1 | 3.40 | -3.0% |
| Victoria | 211 | 6,615.0 | 3.19 | 234 | 6,547.8 | 3.57 | 12.0% |

Figure 2: Fatalities per 100,000 population, by State, 12 months ending December 2021

Appendix A

The terms **crash**, **casualty** and **vehicles involved** are used within the Appendix. To assist with the explanation of these terms, the following example has been provided. If two motor vehicles collide, then one road traffic crash has taken place which involved two vehicles/controllers. If there were three people injured in one of the motor vehicles and two people injured in the other motor vehicle, then this one crash has resulted in five casualties.

A.1 Fatalities as a result of crashes

A **fatality** is recorded when a person dies within 30 days as a result of injuries sustained in a road traffic crash.

Table A.1.1: Fatalities by gender and age group, Queensland, 2021 compared with 2020 and the 2016 to 2020 average

| Gender / Age Group | 2016 to 2020 Average | | 2020 | | 2021 | | 2021 v 2020 | | 2021 v 2016 to 2020 Average | |

Note:

₁ Drug driving information is available from 2017

₂ Unrestrained vehicle occupant fatalities are calculated as a percentage of all vehicle occupant fatalities, where restraint use was known

₃ PMD involvement is available from 1 November 2022

A.2 Motor vehicles/controllers involved in fatal crashes

A **motor vehicle** is a unit type grouping that includes the following vehicle (unit) types: car, station wagon, utility, panel van, rigid truck, articulated truck, bus, motorcycle, moped, road train/B-Double/B-Triple and special purpose vehicle. Pedestrians, bicycles, towed devices, wheeled recreational devices (WRD), personal mobility devices (PMD, e.g. Segway) and animals are NOT considered motor vehicles.

A **special purpose vehicle** refers to plant, machinery and equipment (e.g. grader, excavator, road roller, motorised road sweeper, farm machinery etc) and any other special purpose vehicle such as ambulance, hearse, fire engine, tow truck, mobile crane, truck with machinery mounted, motorised camper, motorised wheelchair, garbage collection vehicle, concrete mixer, mobile home, golf buggy and motorised go-kart. Vehicles must be capable of exceeding 10km/hr.

A **motorcycle** refers to mechanically or electrically propelled two, three or four wheeled bikes including motorcycles with or without side-cars or trailers, motor scooters, trail bikes, mini bikes, and mopeds.

Please note that some vehicle (unit) types are not reportable individually.

Table A.2.1: Motor vehicles involved in fatal crashes by vehicle type, Queensland, 2016 to 2021
