Port procedures and information for shipping – Port Of Gladstone May 2024

This document is intended for digital use only. Please refer to the Maritime Safety Queensland website for the latest version. 139

16.8 Helicopter Operations Information (Gladstone)

You must advise your agent at least 12 hours prior to pilot boarding that you have read and understood these regulations; failure to do so will result in delays to your ship.

The embarkation and disembarkation of personnel by helicopter imposes certain mandatory conditions on the part of the ship and you, its master. These will involve the deck party being at a state of readiness for emergency action of a different nature but to a greater degree of preparation than that required for pilot launch transfer operations. If the helicopter attempts to make an emergency landing on board this may involve flying debris, spilt fuel with the associated danger of fire and more than likely, seriously injured personnel.

To assist in helicopter transfers, it is mandatory for the vessel to ensure that the <u>Gladstone Pilot Helicopter (Landing) Operations form</u> (16.9) is completed and returned to the Gladstone VTS Centre when the vessel booking application is made.

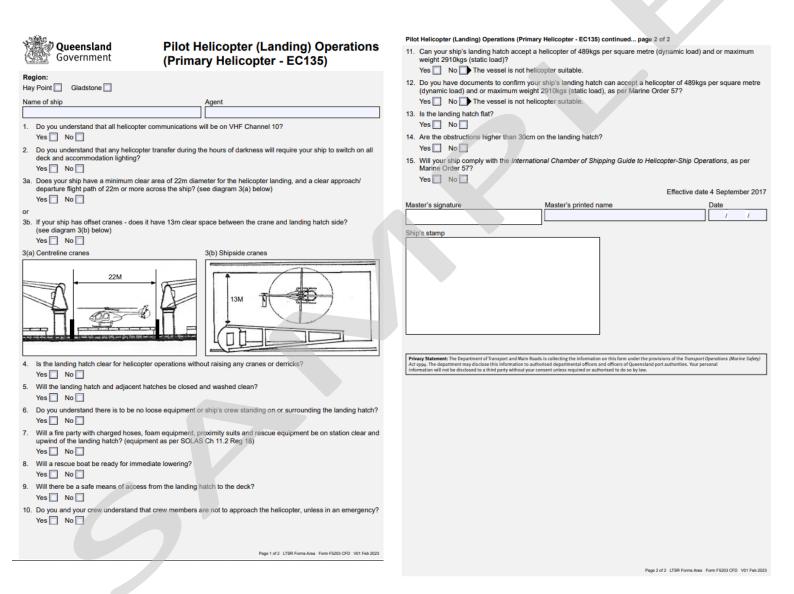

Under no circumstances will helicopter landings or uplifts be permitted from any vessel when bunker barge MV *Larcom* is moored alongside such vessel. This applies regardless of whether or not fuelling operations are in progress.

Further and more detailed information may be obtained from AMSA Marine Notices, AMSA Marine Order 57 and the International Chamber of Shipping (ICS), 'Guide to Helicopter/Ship Operations'.

16.9 Gladstone Pilot Helicopter Operations Declaration

Please follow this link to access the official fillable PDF form: <u>F5203 - Pilot Helicopter</u> (Landing) Operations (Primary Helicopter - EC135)

This is a replica of the form and is not intended to be used

This document is intended for digital use only. Please refer to the Maritime Safety Queensland website for the latest version. 141

16.10 Gladstone Port Navigation Depths

The following table indicates the designed navigation depths for the port of Gladstone.

Mariners are advised that the actual depth may vary from the design depth and should consult the Notice to Mariners website located on the MSQ website (http://www.msq.qld.gov.au/Notices-to-Mariners.aspx) or contact the office of the Regional Harbour Master (Gladstone).

Gladstone Port Authority

Port Operations Officer Fax: +61 7 4972 3045 Ph: +61 7 4976 1333

Tankers operating without inert gas:

Tankers operating without inert gas may only berth at a non tanker berth provided all cargo tanks, slop tanks, cargo lines and associated pipe work are certified gas free by an independent chemist. That is, that the vessel is in a completely gas free condition.

Tankers operating with inert gas:

- The vessel's inert gas system MUST be fully operational so as to maintain a positive pressure in inerted tanks at all times. If work is to be carried out on the ship's inert gas installation or boiler or other sections of plant or piping which affect inert gas supply, an independent supply of inert gas is to be put into place and fully operational prior to repair work commencing.
- Any tank, including slop tanks, containing high flash point cargo or residues, MUST have the ullage space maintained in an inert condition unless otherwise authorised by the Gladstone Ports Corporation.
- All empty tanks that last carried a low flash cargo MUST be washed and/or gas freed and not have a vapour test reading in excess of the equivalent to 1% hydrocarbon as referenced to Hexane.
- Any empty tank that last carried a low flash cargo and has not been gas freed MUST not have a hydrocarbon content exceeding 2% by volume.
- Special conditions apply to slop tank(s) that contain low flash point slops/products.
- a) Wherever possible slops should be confined to a single designated slops tank.
- b) If the flash point is <60°C then the tank MUST be tested and certified that the content of low flash product within the slops does not exceed 5% of the tank's volume.
- c) The ullage space of the slop tank MUST be inserted.
- Positive inert gas pressure on tanks is to be maintained at all times and the oxygen content of the inert gas MUST not exceed 5%.
- If a vessel's inert gas system were not operational, then she would be classed as a "tanker operating without inert gas" and is to follow the requirements as per a vessel of this type.

16.31 Instructions to Masters of Ships Berthed Within Zone 1

To:	The Master	
C.C:	AGENT	DATED: / /

is

Instructions to Masters of ships berthed within 800 metres of a nuclear powered warship berthed in the port of Gladstone.

A Nuclear Powered Warship, the berthed within 800 m of your vessel.

The vessel is due to depart on:

In case of a reactor accident in the vessel the Regional Harbour Master via GLADSTONE VTS on VHF channels 13 or 16 will advise. On receipt of such advice, you are requested to take the following action:

As far as possible, shut down ventilation or turn to recirculation and close hatches, scuttles, port holes, doors and openings, etc, to minimise the ingress of airborne radioactive material;

If non-essential personnel have access to transport they should self-evacuate to the assembly area, which is situated on ______. Emergency services personnel will direct your personnel to the assembly area.

All personnel remaining on board should seek shelter below decks until otherwise instructed. Ideal shielding is likely to be provided by your accommodation and/or engine room;

You should contact Gladstone VTS on VHF channel 13 or 16 if you have any queries.

M (VTM)

p.p. Regional Harbour Master (Gladstone)

16.32 Small Craft Ship Navigation Areas and Recommended Courses

For a high resolution map please visit Section 16.32 Small Craft Ship Navigation Areas and Recommended Courses - Gladstone: Port Procedures and Information for Shipping -Publications | Queensland Government

en small craft and large ships eensland waters.

Gladstone Ports Corporation are continually cpanding the Port of Gladstone with creased shipping activities as a result.

Where possible, keep clear of ship navigation areas (major shipping rou pilot boarding grounds, anchorages, channels, swing basins and berths). outes Jse a recommended small craft course, provided, as a safer alternate route.

e ships at maximum draft have minima er keel clearance and can only oeuvre within the designated shipping

When in a swing basin or along side a ships are accompanied by tugs and vessels. Keep well clear.

rge ships with the bridge at the stern III have a large blind spot for several undred metres in front of the bow. This ind spot extends much further forward vill argo or containers are carried

Ships can approach quickly and silently. At night, judgement of distance over water s more difficult. Ships do not have brakes and can take up to 2 nautical miles or to come to a complete stop

of a vessel 10m in length or greater must report to Gladstone Harbour Control (VTS) on VHF channel 13 and maintain a listening watch

For Gladstone, the master

on that frequency when entering, leaving or moving within the Gladstone Pilotage Area

Report your intention to travel along any channel prior to commencing. If you must havigate in a shipping channel, you must keep to the outer edge of that channel and must maintain an all round visual wato cluding monitoring the VHF radio channe or local traffic movement information.

Sailing vessels are required to utilise the safe navigable waterway extending from the recommended small craft course for the South Channel and the waters to the south thereof; and after making the crossing of the shipping channel at aids to navigation G1 and G2 as indicated, to then proceed in a similar manner on the northern side of the recommended small craft course to travel to The Narrows or the North Channel, or until the crossing of the shipping channel towards the entrance of Auckland Inlet and towards the entrance of Auckland Inlet and the Gladstone Marina as indicated.

Anchoring is prohibited in shipping channels, berth pockets and swing basins. Other areas where vessel activities may be prohibited or restricted will be promulgated in Notice to Mariners, on the MSQ website.

Always transit directly across a channel behind a large ship, and only when it is clear and safe to travel.

Between sunset and sunrise, as well as periods of restricted daytime visibility, always show correct navigation lights when at anchor or under way.

(EEP SAFE by conducting all boating activity well clear of ship navigation areas

MAINTAIN a proper lookout at all times

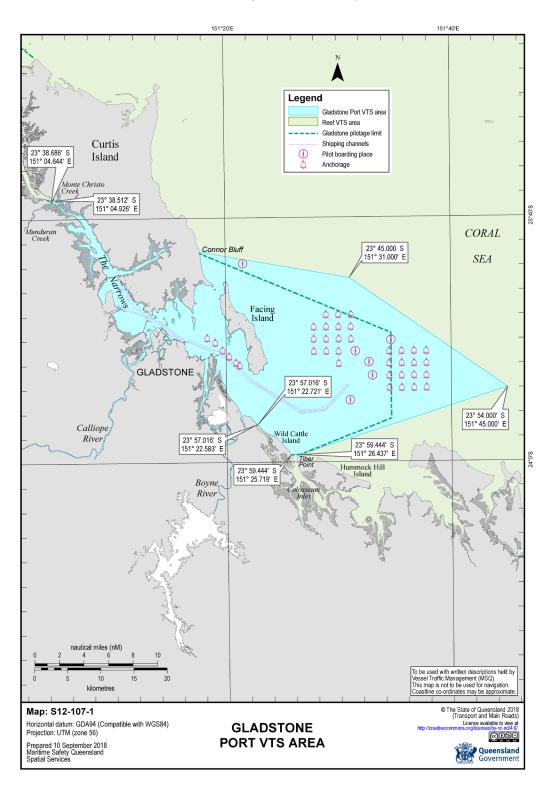

NOW your responsibility

Name and address

Department of Transport and Main Roads

Date:

Dear Captain/Madam/Sir,

Deed of Indemnity - Port of Gladstone Escort Tugs

Vessel

All Liquefied Natural Gas (LNG) vessels loading cargo in the Port of Gladstone will be required to connect two escort tugs which will be tethered in tandem when entering and departing the harbour. The process of Tethered Escort Towage (TET) has been extensively simulated to prove the feasibility of the operation in the Port of Gladstone. Tugs specifically designed for the task will be utilised for escort towage.

Background

This letter relates to Chapter 9 Tug Requirements for LNG, and Appendix 16.39 Deed of Indemnity – Port of Gladstone Escort Tugs (attached) of the Port Procedures and Information for Shipping – Gladstone (PPM Gladstone) as updated from time to time. The PPM Gladstone requires the use of escort tugs for LNG vessel: entering the port.

For TET, all LNG vessels are required to be equipped with bitts, bollards, chocks and fairleads with a minimum Safe Working Load (SWL) of 150 tonnes.

Further matters

LNG vessels will transit all channels and cuttings with two approved escort tugs at speeds up to about 10 knots with tugs made fast. Although the decision as to where to make the tugs fast will be made after consultation between the pilots and the LNG vessel master, it is expected that both escort tugs should be attached on the stern (tandem deployment) for inbound and outbound transits of the port.

Four escort tugs should be ready to make fast between A1 and A5 subject to the discretion of the harbour pilot in charge in conjunction with the vessel's master. All tugs will be progressively released on departure between A5 and A1 also subject to the discretion of the harbour pilot in charge in conjunction with the vessel's master.

Requirements

The tug securing equipment on your vessel may require tethered escort tugs to exceed the equipment's maximum SWL.

It is a condition of approval of escort towage for your vessel, as described above, that you provide an indemnity in relation to any damage caused by the escort tugs to your vessel.

16.38 Vessel Interaction Prevention CCF Berths

10 December 2021

Dear Captain VESSEL INTERACTION PREVENTION CCF Berths

Queensland Government Department of Transport and Main Roads

You are currently berthed at the Clinton Coal Facility (CCF), this places your vessel close to the channel used by outbound deep draft vessels departing the WICET coal terminal, or from deep draft vessels departing CCF1 (if you are berthed at CCF2, CCF3 or CCF4).

Whilst every effort will be made to reduce the effects of interaction of passing vessels on your vessel, it is important that you:

- 1. Follow the direction of Wharf Supervisors at CCF with respect to mooring lines,
- 2. Ensure your vessel is hard against fenders when a deep draft vessel from WICET or CCF1 is passing, and
- 3. Maintain a continuous watch on VHF channel 13.

Yours faithfully,

John Fallon Regional Harbour Master – Gladstone

Martime Safety Queensland-Gladstone Level 7, 21Yaroon Street Gladstone Queensland 4580 PO Box 123 Gladstone Queensland 4680 Telephone: +61 7 43715200 Facsimile: +61 7 4971 5243 Website: <u>www.msq.qld.gov.au</u> Email:<u>Gladstone.RHM@maq.qld.gov.au</u>

16.39 Barney Point Wharf Passing Vessel Interaction Prevention

24 June 2014

To Whom It May Concern

BARNEY POINT WHARF PASSING VESSEL INTERACTION PREVENTION

- In April 2012 Gladstone Ports Corporation met with key stakeholders regarding Vessel Interaction at Barney Point and how best to mitigate the risk of vessels pulling away from the Berth, during passing by a deep draft vessel. The result of this meeting was a Memorandum, issued by GPC detailing additional requirements for vessels berthed alongside Barney Point when all of the following conditions are met:
 - a. Vessel passing Barney Point Wharf is >14.0m draft
 - b. Vessel at Barney Point Wharf is >13.5m deepest draft
 - c. Length Overall of vessel at Bamey Point Wharf is >225m
 - d. Beam of vessel at Barney Point Wharf is ≥32m
- 2. The requirements to be implemented when all the above conditions are met are:
 - a. A pilot is to be on board 30 minutes prior to the vessel passing,
 - b. A tug is to be ready to engage 30 minutes prior to the vessel passing and remain ready until the vessel has passed and is clear,
 - c. The vessel crew should tension lines and put them on the brake 30 minutes prior to the vessel passing and be clear of the deck 10 minutes prior, and
 - d. The gangway is to be raised until the vessel has passed and is clear.
- 3. In view of the continued risk of vessel interaction at Barney Point and to maintain safety, I am writing to advise that the decisions from the April 2012 meeting remain extant and that charges incurred will be sent to the Shipping Agency of the ship alongside Barney Point.
- 4. In addition since the introduction of the requirements of the Memorandum in 2012, additional requirements have been implemented to further mitigate risks. These include the requirement for vessels to have the starboard side anchor lowered underfoot at all times while made fast and for vessels to maintain 1.0m Under Keel Clearance at all times while alongside. These requirements will also continue to be enforced.

Port procedures and information for shipping – Port Of Gladstone May 2024 This document is intended for digital use only. Please refer to the Maritime Safety Queensland website for the latest version. 183

Queensland Government Department of Transport and Main Roads

- 5. For your information, vessels berthing at Barney Point and the Clinton Coal Terminal are presented with a direction from myself by the Pilot on-board when they arrive. This direction lists the requirements for vessels alongside both facilities. A copy of this form is also enclosed.
- 6. Please don't hesitate to contact me any further information.

Yours faithfully,

John Fallon Regional Harbour Master – Gladstone
